

Universitat de Lleida

DEGREE CURRICULUM  
**IMAGE DIAGNOSIS**

Coordination: LÓPEZ HELGUERA, IRENE

Academic year 2023-24

Subject's general information

<b>Subject name</b>	IMAGE DIAGNOSIS				
<b>Code</b>	100359				
<b>Semester</b>	1st Q(SEMESTER) CONTINUED EVALUATION				
<b>Typology</b>	<b>Degree</b>	<b>Course</b>	<b>Character</b>	<b>Modality</b>	
	Double bachelor's degree: Bachelor's Degree in Veterinary Medicine and Bachelor's Degree in Science and Production	4	COMPULSORY	Attendance- based	
<b>Course number of credits (ECTS)</b>	6				
<b>Type of activity, credits, and groups</b>	<b>Activity type</b>	PRACLIN	PRALAB	PRAULA	TEORIA
	<b>Number of credits</b>	1	1.4	0.6	3
	<b>Number of groups</b>	6	4	2	1
<b>Coordination</b>	LÓPEZ HELGUERA, IRENE				
<b>Department</b>	ANIMAL SCIENCE				
<b>Teaching load distribution between lectures and independent student work</b>	60 contact hours 90 non-contact hours				
<b>Important information on data processing</b>	Consult <a href="#">this link</a> for more information.				
<b>Language</b>	Spanish Catalan English				

Teaching staff	E-mail addresses	Credits taught by teacher	Office and hour of attention
BASSOLS WOLF, MARTA	marta.bassols@udl.cat	4,8	
LÓPEZ HELGUERA, IRENE	irene.lopez@udl.cat	2,2	
MOLIN MOLINA, JESSICA	jessica.molin@udl.cat	3,8	
ROSSELLO VALLES, JOAN PERE	joan.rossello@udl.cat	,3	
SANCHEZ SALGUERO, XAVIER	xavier.sanchez@udl.cat	4,7	

## Learning objectives

-Know the production and properties of ionizing radiation. Know the risks associated with its use and the necessary protection regulations.

-Acquire the theoretical and practical knowledge necessary for radiodiagnosis in veterinary medicine.

-To acquire the theoretical and practical knowledge necessary to apply ultrasound in the veterinary clinic.

-Know the advanced imaging techniques, mainly CT (Computed Tomography) and MRI (Magnetic Resonance), but also scintigraphy and laparoscopy.

-Know how to choose the appropriate diagnostic method in each case

-Use the appropriate nomenclature for each diagnostic technique

-Know how to interpret the results generated in each of the different diagnostic techniques.

-Know the production and properties of ionizing radiation. Know the risks associated with its use and the necessary protection regulations. -Acquire the theoretical and practical knowledge necessary for radiodiagnosis in veterinary medicine. -To acquire the theoretical and practical knowledge necessary to apply ultrasound in the veterinary clinic. -Know the advanced imaging techniques, mainly CT (Computed Tomography) and MRI (Magnetic Resonance), but also scintigraphy and laparoscopy. -Know how to choose the appropriate diagnostic method in each case. -Use the appropriate nomenclature for each diagnostic technique. -Know how to interpret the results generated in each of the different diagnostic techniques.

## Competences

### BASIC COMPETENCES

CB1, CB2, CB3, CB4, CB5

### TRANSVERSAL COMPETENCES

CT1, CT2, CT3, CT4, CT5

### GENERAL COMPETENCES

CG2 The prevention, diagnosis and individual or collective treatment, as well as the fight against animal diseases, whether they are considered individually or in groups, particularly zoonoses.

CG5 Knowledge and application of legal, regulatory and administrative provisions in all areas of the veterinary profession and public health, understanding the ethical implications of health in a changing global context.

CG6 Development of professional practice with respect to other health professionals, acquiring skills related to teamwork, the efficient use of resources and quality management.

CG7 Identification of emerging risks in all areas of the veterinary profession

### SPECIFIC COMPETENCES

CE14. Identify and apply the methods and procedures of clinical examination, complementary diagnostic techniques and their interpretation, as well as identify and apply the fundamentals of autopsy.

CE15 Identify and apply diagnostic imaging and radiobiology

CE16. Identify and apply the recognition and diagnosis of the different types of injuries and their association with pathological processes

CE22. Know the infectious and parasitic diseases of veterinary interest including their diagnosis and fight as well as apply the bases of Zoonosis and Public Health

CE40. Perform basic analytical techniques and interpret their clinical, biological and chemical results, interpret the results of tests generated by other laboratories as well as collect, preserve and send all types of samples with their corresponding report.

CE42. Use radiographic and ultrasonographic equipment, as well as other equipment that can be used as diagnostic means, safely and in accordance with regulations

## Subject contents

### THEORETICAL PROGRAM:

#### THEORETICAL BLOCK 1:

1. Basic principles of the main diagnostic techniques used in the veterinary clinic.
2. Thoracic cavity and the different imaging tests.
3. Extremities and the different image tests.

## **THEORETICAL BLOCK 2:**

4. Abdominal cavity and the different imaging tests.
5. Diagnostic imaging in exotic animals.
6. Imaging techniques in large animals.

## **THEORETICAL BLOCK 3:**

7. Neuroanatomy and image diagnosis of the CNS.

## **PRACTICAL PROGRAM:**

- Positioning the patient to perform the imaging tests.
- Diagnostic imaging of different pathologies of the thoracic cavity.
- Ultrasound of the abdominal cavity.
- Computed axial tomography.
- Diagnostic imaging of different limb pathologies.
- Imaging tests on different exotic animals
- Magnetic resonance. I
- imaging diagnosis in the equine clinic.
- Per-image diagnosis of different pathologies of the abdominal cavity.
- Neuro: axial skeleton image.
- Neuro: brain dissection.
- Neuro: CT / MRI image of the CNS.
- CT / MRI Cases
- Presentation of clinical cases.
- Description and interpretation of the different images resulting from different tests available in the veterinary clinic.

## **Methodology**

The teaching activity is structured in theory and practice sessions.

- Theoretical classes: they are based on master class sessions that aim to transmit the basic knowledge of each subject.
- Practices: they are based on seminar sessions, clinical cases and practical application of theoretical knowledge.

The didactic material of the subject will be shared as a resource on the virtual campus.

## **REGULATION OF THE SUBJECT**

N1. No changes of groups or practices are allowed except for those justified by an official medical certificate or the exchange of participants.

N.2 It is required to wear surgical pajamas and / or a gown to access the practices that are carried out in operating rooms, consultations or in the radiodiagnosis service of the Unitat Quirúrgica Docent de Torrelameu. Failure to meet this requirement, the student will not be able to access the practice.

N3. Punctuality is required in the theoretical and practical sessions. A session will not be accessible if after 10 minutes from the start.

N4. If it is detected that a student copies in an exam, the immediate expulsion will be carried out and the responsible person will have to recover the entire subject.

All activities will be in person if sanitary conditions allow it. Otherwise, the sessions will be done virtually.

## Development plan

The theoretical classes will establish the basic knowledge of the fundamentals and execution of the main image diagnosis techniques used in Veterinary Clinic, as well as the reading of real images obtained through these different techniques. The lectures will be based mostly on PowerPoint projections.

The seminars will reinforce the theoretical aspects, as well as the attitudes and practices necessary for personal safety, that of the animal and that of the team. T

For practical training, students must come conveniently equipped with personal protective equipment . Students will not be allowed entry into the room if they do not have this minimum equipment.

## Evaluation

### **THEORETICAL BLOCK 1 (28%)**

This block will consist of two exams: a test part (40%) and a written one with clinical cases or development questions (60%) that will be done on the same day.

### **THEORETICAL BLOCK 2 (25%)**

This block will consist of two exams: a test part (40%) and a written one with clinical cases or development questions (60%) that will be done on the same day.

### **THEORETICAL BLOCK 3 (25%)**

This block will consist of a multiple choice exam

### **PRACTICAL BLOCK (12%)**

Some practices of the subject will be evaluated during the practice or by means of a test through the virtual campus at the end of it. The average of these tests will configure the practical grade for the subject, which will represent 12% of the final grade for the subject. In case of not attending a practice or not taking the corresponding test, that activity will have a grade of 0.

### **WORK-CLINICAL CASE BLOCK (10%)**

The students, in small groups, will make an oral presentation of a clinical case of diagnostic imaging. The grade will be the same for all the members of the group and will represent 10% of the final grade for the subject.

To assess the work, the following rubric will be taken into account: Oral presentation / clarity (up to 5 points) Exposed document/ organization/ methodology (up to 5 points) Scientific value (bibliography, documentation) (up to 5 points) Your knowledge of imaging tests (up to 5 points) Questions/answers (up to 5 points)

**There will be no examen resit for any activity.**

As of 8 in the final mark (exams + practical activities), the mark may be weighted to grant honors if it is considered appropriate based on the student's evolution during the semester.

According to the regulations of the udl and the school, it is completely forbidden to cheat in the exams, as well as not respecting the previously established rules of the test (mobile devices, digital watches, etc.). In the event that a student fails to comply with this rule, they will be expelled from the exam immediately and will not have the right to take the exams.

## **ALTERNATIVE ASSESSMENT:**

In the event that the student requests the alternative evaluation, meets the requirements and is granted by the direction of studies, the alternative evaluation of this subject will be the following: Single theoretical exam with a value of 80% (test part + written part of cases) at the end of the subject and a practical exam with a value of 20%. The exam may be done orally if deemed appropriate.

**EVALUATION OF REPEATING STUDENTS:** Due to the change in the evaluation system, repeating students may exceptionally remain with the evaluation system of the past year. The day of the presentation of the subject will give all the detailed information.
