Subject's extra information

We assume the students have all the concepts of Introduction to Programming I as we build upon them into two directions: object-oriented programming and recursive design.

Learning objectives

- To apply the Object Oriented Programming paradigmn to simple problems.
- To use the basic Java file types
- To design simple recursive algorithms
- To use the Java standard documentation
- To use an Intengrated Development Environment

Competences

- Cross-disciplinary competences
 - EPS1: Capacity to solve problems and prepare and defence arguments inside the area of studies.
 - EPS5: Capacity of abstraction and of critical, logical and mathematical thinking.
 - EPS9: Capacity for unidisciplinary and multidisciplinary teamwork.
 - EPS12: To be motivated for the quality and steady improvement.
- Specific competences
 - **GII-FB3:** Capacity to understand and master the basic concepts of discreet mathematics, logical, algorithmic and computational complexity, and its application to solve engineering problems.
 - **GII-FB4:** Basic knowledge of the use and programming of computers, operating systems, databases and computer programs with applications in engineering.
 - **GII-FB5:** Knowledge of the structure, organisation, operation and interconnection of the computer systems, the basics of programming, and its application to solve engineering problems.
 - **GII-FB7:** Knowledge, design and efficient use of the types and data structure more suitable for solving a problem.
 - **GII-FB9:** Capacity to know, comprise and evaluate the structure and architecture of computers, as well as the basic components that conform them.

Methodology

Big Size Groups: Theory Classes (3 cretits)

- Theory: Classes supported by handnotes
- Practical application: always working on concrete examples.

Mid Size Groups: Laboratory Classes (3 credits)

- Aimed to the resolution of practical cases by the students (there is a problems collection which includes exams from previous years)
- Personal tutoring of projects and difficulties.
- Use of an Integrated Development Environment.

Autonomous Work

• Software projects are done non-presentially.

• We recommend students to solve the problems in the collection to practice and get feedback from the teaching staff.

• Numbers in the second column correspond to the section in the handouts of the subject.

• Those in the third to the numbers in the associated problems collection.

Acr	Activity	Weight	Minimum grade to pass	Mandatory	Recoverable
Ex1	1st Midterm	25%	4,0	YES	YES (with 2nd midterm)
Ex2	2nd Midterm	25%	4,0	YES	YES (with recovery exam with a max grade of 7)
Proj1	Project 1	15%	NO	NO	YES (at week 18 with a max grade of 5)
Proj2	Project 2	20%	NO	NO	YES (at week 18 with a max grade of 5)
Proj3	Project 3	15%	NO	NO	NO

Final Grade = 0,25 * Ex1 + 0,25 * Ex2 + 0,15 * Proj1 + 0,20 * Proj2 + 0,15 * Proj3

- Subject is passed if Final Grade is greater or equal than 5
- A passed 2nd midterm recovers a failed 2nd midterm
- First midterm garde is only taken into account if its greater than 2nd midterm (if not, the 2nd midterm grade is used)
- If the student has to take the recovery exam, the maximum grade of therory is 7
- If the student has to re-send the first or second project at the end of teh course, the project will get a maximun grade of 5.
