

Universitat de Lleida

DEGREE CURRICULUM

ALGEBRA

Coordination: PUJOLAS BOIX, JORDI

Academic year 2020-21

Subject's general information

Subject name	ALGEBRA		
Code	102005		
Semester	1st Q(SEMESTER) CONTINUED EVALUATION		
Typology	Degree	Course	Character
	Double bachelor's degree: Degree in Computer Engineering and Degree in Business Administration and Management	1	COMMON
	Bachelor's Degree in Computer Engineering	1	COMMON
Modality	Attendance-based		
Course number of credits (ECTS)	6		
Type of activity, credits, and groups	Activity type	PRAULA	TEORIA
	Number of credits	3	3
	Number of groups	4	1
Coordination	PUJOLAS BOIX, JORDI		
Department	MATHEMATICS		
Teaching load distribution between lectures and independent student work	6 ECTS correspond to a workload of 60 h of lectures and assesment and 90 h autonomous study work for each student.		
Important information on data processing	Consult this link for more information.		
Language	Preferably in catalan. Lectures can be given in spanish or english, if required.		
Distribution of credits	Theoretical lectures are combined with problem solving sessions.		
	During academic year 20/21 the learning model will be mixed, combining on-line and face-to-face lectures.		
	On-line lectures will take 2 hours per week. There will be 3 face-to-face groups, with 2 hours per week of classroom activities each.		

Teaching staff	E-mail addresses	Credits taught by teacher	Office and hour of attention
MIRET BIOSCA, JOSE MARIA	josepmaria.miret@udl.cat	3	
PUJOLAS BOIX, JORDI	jordi.pujolas@udl.cat	6	
VALLS MARSAL, MA MAGDALENA	magda.vallsmarsal@udl.cat	6	

Subject's extra information

Previous knowledge/skills on basic mathematics (General Upper Secondary Education level) are recommended.

This subject is scheduled in the fall semester of the 1st year.

The knowledge and competencies acquired in this subjects will be useful to follow other subjects with contents related with logics, data structure, discrete mathematics and the subjects in the especialization on Computation.

Learning objectives

- Appropriately use set operations, both to simplify expressions or to prove equalities.
- Recognize equivalence and order relations (total and partial).
- Obtain the quotient set and the equivalence classes.
- Determine the characteristic elements in an ordered set.
- Distinguish injective, exhaustive and bijective maps.
- Manipulate the composition of maps and inverse maps.
- Apply mathematical induction to show different mathematical statements.
- Recognize the algebraic structures of group, ring and field.
- Adequately use the elements in modular arithmetic.
- Solve diophantine equations and linear congruencies.
- Encrypt and decrypt with the RSA cryptosystem.

Competences

Specific competences

- GII-FB1 - Capacity to solve mathematical problems arisen in the engineering field. Aptitude to apply knowledge on: linear algebra; differential and integral calculus; numerical methods; algorithmic, numerical; statistics and optimisation.
- GII-FB3 - Capacity to understand and master the basic concepts of discrete mathematics, logical, algorithmic and computational complexity, and its application to solve engineering problems.

Cross-disciplinary competences

- EPS1 - Capacity to solve problems and prepare and defence arguments inside the area of studies.
- EPS5 - Capacity of abstraction and of critical, logical and mathematical thinking.

University strategic competences

- CT5 - Acquire knowledge in scientific thinking.

Subject contents

I. SET THEORY

1. Sets.

- Sets and elements. Subsets.
- Set operations.
- Laws of the algebra of sets.
- Partition of a set.
- Cartesian product.

2. Relations

- Relations in a set: definitions and examples.
- Equivalence relations. Equivalence classes and quotient set.
- Order relations. Characteristic elements.
- Hasse diagram to represent an ordered set.

3. Maps.

- Map between sets: definitions and examples.
- Injective, surjective and bijective maps.
- Composition of maps.
- Inverse map.

4. Induction and denumerability

- Mathematical induction.
- Infinite sets and denumerable sets.

II. ALGEBRAIC STRUCTURES AND ARITHMETIC

5. Algebraic structures.

- Algebraic composition laws. Properties.
- Group structure: definitions, properties, examples.
- Ring and field structures: definitions, properties, examples.

6. Modular arithmetic.

- Division of integers. Divisors and multiples.
- Greatest Common Divisor. Euclidean algorithm. Bézout's identity.
- Linear diophantine equations.
- Prime numbers. Fundamental theorem of arithmetic.
- Congruences. Linear congruences.
- Chinese remainder theorem.
- Modular exponentiation. Fermat's and Euler's Theorems.
- Introduction to cryptography: RSA cryptosystem

Methodology

Theoretical and practical contents are mixed for the sake of combining basic aspects with illustrative examples and problem solving.

Problem solving combines joint resolution on the blackboard or individual resolution. Some sessions will be devoted to group problem solving. Proposed problems are either solved and presented by students, or collected to be assessed.

The students will be provided beforehand with the collection of problems to be solved, as well as the exams of previous years, which will be solved in groups.

During academic year 20/21 lectures will be developed in a mixed model: theoretical lectures will be given on-line, while problem solving lessons will be held in the classroom. All data transmitted or registered during online sessions follows the data protection policy of UdL.

Development plan

Week	Lesson	Activities	Student workload
1	Introduction. Lesson 1	Lectures	4 hours. Study and problem solving.
2	Lesson 1	Lectures and problem sessions	4 hours. Study and problem solving.
3	Lesson 1	Lectures and problem sessions	4 hours. Study and problem solving.
4	Lesson 2	Lectures and problem sessions	4 hours. Study and problem solving.

Week	Lesson	Activities	Student workload
5	Lesson 2	Control 1	6 hours. Study for control.
6	Lesson 3	Conferences attendance	4 hours. Study and problem solving.
7	Lesson 3	Lectures and problem sessions	4 hours. Study and problem solving.
8	Tema 4	Lectures and problem sessions	6 hours. Study and problem solving.
9		Partial 1 Assessment	8 hours. Study for exams
10	Lesson 4	Lectures and problem sessions	4 hours. Study and problem solving.
11	Lesson 5	Control 2	6 hours. Study for control.
12	Lesson 5	Complementary book reading	4 hours. Study and problem solving. Reading complementary book.
13	Lesson 6	Lectures and problem sessions	4 hours. Study and problem solving. Reading complementary book.
14	Lesson 6	Lectures and problem sessions	4 hours. Study and problem solving. Reading complementary book.
15	Lesson 6	Complementary reading assessment	8 hours. Study for exams.
16		Tutorization	8 hours. Study for exams.
17		Partial 2 Assessment	8 hours. Study for exams.
18		Tutorization	
19		Final assessment	

Evaluation

Acr.	Assessment activities	Weight	Minimum Mark	Resit
C1	Control 1. Lesson 1.	1 point	No	No
P1	Partial 1. Lessons 1, 2, 3.	4 points	1 point	Yes
C2	Control 2. Lesson 4.	1 point	No	No
P2	Partial 2. Lessons 4, 5, 6	4 points	1 point	Yes
AC	Complementary activities : complementary reading or attending mathematic-related conferences or exhibitions	0.5 points	No	No
PCL	Participation	0.5 points	No	No

A student with final mark below 5 or who has not reached the minimum marks required, can resit either P1, P2 or both.

FinalMark = C1 + P1 + C2 + P2 + AG+ PCL
