

Universitat de Lleida

DEGREE CURRICULUM
DISCRETE MATHEMATICS

Coordination: LOPEZ LORENZO, IGNACIO

Academic year 2016-17

Subject's general information

Subject name	DISCRETE MATHEMATICS			
Code	102007			
Semester	1st Q(SEMESTER) CONTINUED EVALUATION			
Typology	Degree	Course	Typology	Modality
	Double bachelor's degree: Degree in Computer Engineering and Degree in Business Administration and Management	2	COMMON	Attendance-based
	Bachelor's Degree in Computer Engineering	2	COMMON	Attendance-based
ECTS credits	6			
Groups	1GG,2GM			
Theoretical credits	3			
Practical credits	3			
Coordination	LOPEZ LORENZO, IGNACIO			
Department	MATEMATICA			
Teaching load distribution between lectures and independent student work	6 ECTS = 25x6 = 150 total hours. 40% --> 60 classroom hours. 60% --> 90 student study hours.			
Important information on data processing	Consult this link for more information.			
Language	Basically in Catalan. Spanish language will be used if there are students with zero knowledge of Catalan.			
Distribution of credits	Nacho López 9			
Office and hour of attention	Tuesday from 10:00 to 12:00 am in office number 1.20 (EPS building)			

Teaching staff	E-mail addresses	Credits taught by teacher	Office and hour of attention
LOPEZ LORENZO, IGNACIO	nlopez@matematica.udl.cat	9	

Subject's extra information

Discrete mathematics is the study of mathematical structures that are fundamentally discrete rather than continuous. Mathematically speaking, the term discrete means that the elements are somehow split away between them. For instance, integers and discrete algebra are part of discrete mathematics (and they have been introduced in Algebra subject). Combinatorics and graph theory are also discrete mathematics and they are part of this subject. Besides, there are many others topics in discrete mathematics, like code theory, cryptography, etc. but they appear in other subjects of the degree. The main reason to put combinatorics and graph theory in this subject is because they have a lot of applications in computer science, in fact, data in the computers is stored meanwhile in a discrete way (through binary sequences of 0's and 1's). This course is a first approach to Graph Theory and Combinatorics.

To follow this subject properly some previous knowledge on basic Algebraic group theory is recommended.

Learning objectives

- Model real problems through graphs.
- To know the basic parameters of a graph and different representations.
- To determine whenever two small graphs are isomorphic
- Distinguish between DFS and BFS strategies.
- To determine whenever a graph is connected.
- To know some connectivity parameters.
- To compute related distance graph parameters.
- To know algorithms in order to compute distances in weighted graphs and non-weighted graphs.
- To compute walks in graphs and related concepts.
- To prove if a given graph is an Eulerian graph, and if it is so, to find an eulerian circuit.
- To study the hamiltoinicity of a graph.
- To identify Trees and their elementary properties
- To recognize in which situations an optimum coloration in a graph is needed.
- To evaluate the efficiency of some basic algorithms related to graphs.
- To know elementary combinatorics.
- To model some counting problems and solving them through combinatorics.
- To know permutations, combinations and variations.
- To apply combinatoric formulas.
- To know the Inclusion–exclusion principle
- To know recurrence relations.
- To solve recurrence linear equations of order two with constant coefficients.

Competences

Strategic Competitions of the UdL according to the “Plan Director de la Docència” approved by the Government Council of UdL on July 10th, 2007.

- CT5. Acquire knowledge in scientific thinking.

Cross-disciplinary competences approved by the Plenary Commission of the Degrees of Industrial Engineering, Computer Engineering and Building Engineering, gathered on June 16th, 2008.

- EPS1. Capacity to solve problems and prepare and defence arguments inside the area of studies.
- EPS5. Capacity of abstraction and of critical, logical and mathematical thinking.

Specific competences that the students have to acquire in the degree in Computer Engineering set in the Royal decree 1393/2007, of October 29th

- GII-FB1. Capacity to solve mathematical problems arisen in the engineering field. Aptitude to apply knowledge on: linear algebra; differential and integral calculus; numerical methods; algorithmic, numerical; statistics and optimisation.
- GII-FB3. Capacity to understand and master the basic concepts of discrete mathematics, logical, algorithmic and computational complexity, and its application to solve engineering problems.

Subject contents

I. BASICS ON GRAPH THEORY

1. Graphs and related objects.

1.0 Graph as mathematical models.

1.1 Definition of a graph.

1.2 Degree of a vertex. Hand shaking lemma.

1.3 Graph representations.

1.4 Graph isomorphism.

1.5 Main graph examples.

1.6 Operations with graphs.

1.7 Directed graphs

2. Connectivity and distances

2.1 Walks in graphs.

2.2 Connected graphs.

2.3 DFS algorithm and connectivity test.

2.4 Distances in graphs: eccentricity, radius and diameter.

2.5 Algorithms for distance computing in graphs: BFS and UCS.

2.6 Graph connectivity.

3. Eulerian graphs and hamiltonian graphs

3.1 Eulerian graphs: characterization.

3.2 Hierholzer algorithm and Fleury algorithm.

3.3 Necessary and sufficient condition on hamiltonian graphs.

II. INTRODUCTION TO COMBINATORICS.

4. Elementary combinatoric topics.

4.0 Introduccion.

4.1 Basic principles in combinatorics.

4.2 Permutations

4.3 Combinations.

4.4 Binomial coefficients.

4.5 Special counting methods: Inclusion and Exclusion.

5. Recurrence relations.

5.0 Introduction.

5.1 Basic terminology on recurrence relations.

5.2 Methods for solving recurrence relations.

5.3 Solving linear recurrence relations of order two with constant coefficients.

Methodology

Big groups: Classes de Teoria (3 crèdits)

- Part teòrica: classes suportades amb apunts i material disponible al campus virtual.
- Part d'aplicació pràctica: es treballa sempre amb exemples i exercicis. Es disposa d'una **col·lecció de problemes**, dels quals es van proporcionant solucions al llarg del quadrimestre.

Small groups: Classes de Problemes (3 crèdits)

- Classes dirigides i seguiment de la resolució de problemes

Student non-classroom work:

- Es recomana que l'alumne resolgui per compte propi els problemes de la col·lecció de problemes que no es resolguin a classe, amb la finalitat de completar el coneixement teòric i pràctic.

Development plan

Dates (Week number)	Description	Activity in big group	Activity in small group	Student work

1-8	Contents of Section I	Master classes and problems resolution.	Problems resolution.	Study and problems resolution.
5	Solve a problem.	Evaluation exercise.	Evaluation exercise.	Study and problems resolution.
9	Exam of contents of section I	Evaluation part.	Evaluation part.	Study and problems resolution.
10-16	Contents of Section II	Master classes and problems resolution.	Problems resolution.	Study and problems resolution.
12	Solve a problem.	Evaluation exercise.	Evaluation exercise.	Study and problems resolution.
17-18	Exam of contents of section II	Evaluation part.	Evaluation part.	Study and problems resolution.
20	Exam.	Recuperation	Recuperation	Study and problems resolution.

Evaluation

The evaluation of discrete mathematics is as follows:

- First partial exam (week number 9), weighted on 4 points, where contents of section 1.
- Second partial exam (week number 17-18), weighted on 4 points, where the rest of the contents will be evaluated (also the basic results of the first section).
- Resolution of two problems either after and before the first partial exam, weighted on 1 point each.
- There is a recuperation exam, weighted en 10 punts, for those students whose qualification is lower than 5 with the sum of qualifications in the points given above.

Acr.	Evaluation activities	Weight	Recuperation
P1	First partial exam	40%	YES
P2	Second partial exam	40%	YES
PRA	Practice	10%	NO
PRB	Problems	10%	NO

$$\text{FinalQualification} = 0,4*P1 + 0,4*P2 + 0,1*PRA + 0,1*PRB$$

Bibliography

Available In Campus Virtual

Related to Combinatorics

- Gimbert, J., Moreno R., Valls M., Notes sobre Combinatòria, Quadern EUP núm. 36, 2002. (en catalán).

Related to Graph Theory

- Gimbert, J., Moreno, R., Ribó, J.M., Valls, M., Apropament a la Teoria de Grafs i als seus Algorismes, Edicions de la UdL, 1998. (In catalán).
