

DEGREE CURRICULUM  
**COMPUTER ARCHITECTURE**

Coordination: ROIG MATEU, CONCEPCIÓN

Academic year 2019-20

## Subject's general information

<b>Subject name</b>	COMPUTER ARCHITECTURE			
<b>Code</b>	102014			
<b>Semester</b>	2nd Q(SEMESTER) CONTINUED EVALUATION			
<b>Typology</b>	<b>Degree</b>	<b>Course</b>	<b>Character</b>	<b>Modality</b>
	Bachelor's Degree in Computer Engineering	2	COMPULSORY	Attendance-based
	Double bachelor's degree: Degree in Computer Engineering and Degree in Business Administration and Management	2	COMPULSORY	Attendance-based
<b>Course number of credits (ECTS)</b>	6			
<b>Type of activity, credits, and groups</b>	<b>Activity type</b>	PRALAB		TEORIA
	<b>Number of credits</b>	3		3
	<b>Number of groups</b>	3		1
<b>Coordination</b>	ROIG MATEU, CONCEPCIÓN			
<b>Department</b>	COMPUTER SCIENCE AND INDUSTRIAL ENGINEERING			
<b>Teaching load distribution between lectures and independent student work</b>	Globally the subject has 60 hours of presential classes and 120 hours of individual working of students.			
<b>Important information on data processing</b>	Consult <a href="#">this link</a> for more information.			
<b>Language</b>	Catalan			
<b>Distribution of credits</b>	3 credits of big group (GG) for the theoretical part, 3 credits of medium group (GM) for problems/practices.			
<b>Office and hour of attention</b>	Monday and Thursday from 10 to 11 h. Room 3.13 EPS			

Teaching staff	E-mail addresses	Credits taught by teacher	Office and hour of attention
ROIG MATEU, CONCEPCIÓN	concepcio.roig@udl.cat	12	

## Subject's extra information

This subject is held during the second semester of the second course of the degree.

This is a compulsory subject.

To follow up the subject it is required to have the knowledge of functional units composing the computer system, that are studied in the previous subjects of Computer Organization I and II.

## Learning objectives

- Studying the global operation and the levels of the memory hierarchy in the computer.
- Learning the organization of the information in the memory system in order to have efficiency in the acces.
- Learning the pipeline mechanism to execute instructions inside the processor and evaluate its performance.
- Study the processes and the algorithms that are needed to carry out basic and complex arithmetic operations inside the arithmetic unit.
- Analyzing different solutions in terms of efficiency and cost. Being able to find which design solutions provide the best tradeoff between cost and performance.

## Competences

Degree-specific competences

- GII-FB5: Knowledge of the structure, organization, workings and inter-connexion of computer systems, the basis of their programming, and their applications in the resolution of engineering problems.
- GII-CRI9: Ability to know, understand and evaluate computer structures and architecture, as well as the basic components which constitute them.

Degree-transversal competences

- EPS5: Ability for abstraction and critical, logical and logical reasoning.

## Subject contents

### 1. Memory hierarchy

#### 1.1. Introduction

General concepts

Principle of locality

#### 1.2. *Cache memory*

- Cache memory configurations

- Mapping and identification of blocs

- Bloc replacing algorithms

- Writing policies

- Data consistency

- Cache performance

## 1.3. Main memory

- Organization for improving performace

- Alternative technologies

## 1.4. Virtual memory

- Elements of virtual memory

- Page table

- TLB (Transaction Look-aside Buffer).

## **2. Pipeline processing**

### 2.1. Basic concepts

### 2.2. Hazard management

- Estructural hazards

- Data hazards

- Control hazards

### 2.3. Influcency of instruction set

### 2.4. Superescalar execution

## **3. Arithmetic processing**

### 3.1. Adder circuits.

- Half-adder, full-adder, parallel adder.

- Carry-look-ahead.

- adder/substractor circuit.

### 3.2. Binary multiplication algorithms.

### 3.3. Binary division algorithms

### 3.4. Floating point arithmetic

- Floating point format

- Approximate representation: rank and precision

- Add and substract operations

- Multiplication and division operations

## Methodology

Classes are divided in different groups, big group (GG), where they attend all the students of the subject and medium group (GM) where there only assist part of the students. The contents of the different kind of groups are divided in the following way:

GG: They are expositive classes where they are shown the main contents on the subject.

GM: they are classes to solve exercises related to the contents exposed in the GG classes, in a participative and interactive way. They also carry out lab practices of memory hierachy with the simulator SMPcaché and of pipeline execution with the simulator WinMIPS64.

## Development plan

Week	description	Activity GG	Activity GM
1	Memory hierarchy	Presentation of the subject. General concepts. Principle of locality.	Exercises of memory hierarchy
2	Memory hierarchy	Cache memory configurations. Mapping and identification of blocs	Exercises of memory hierarchy
3	Memory hierarchy	Bloc replacing algorithms. Writing policies	Exercises of memory hierarchy
4	Memory hierarchy	Data consistency	Exercises of memory hierarchy
5	Memory hierarchy	Cache performance	Practices of memory hierarchy
6	Memory hierarchy	Main memory. Virtual memory.	Practices of memory hierarchy
7	Pipeline processing	Basic concepts	Exercises of pipeline processing
8	Pipeline processing	Hazard management	Exercises of pipeline processing
9	Partial evaluation activities.	Realization of first partial exam	
10	Pipeline processing	Hazard management	Practices of pipeline processing
11	Pipeline processing	Influence of instruction set. Superscalar execution	Practices of pipeline processing
12	Arithmetic processing	Adder circuits	Exercises of arithmetic processing.
13	Arithmetic processing	Binary multiplication algorithms	Exercises of arithmetic processing.
14	Arithmetic processing	Binary division algorithms	Exercises of arithmetic processing.
15	Arithmetic processing	Floating point arithmetic	Exercises of arithmetic processing.
16 i 17	Partial evaluation activities	Realization of second partial exam	
18	Seminars		
19	Recuperation evaluation activities	Realization of the recuperation exam, if needed.	

## Evaluation

Acrr.	Evaluation activity	Weighing	Minimum mark	In group	Compulsory	Recoverable

P1	Exam 1 <sup>er</sup> Partial	30%	NO	NO	YES	YES
P2	Exam 2 <sup>on</sup> Partial	50%	NO	NO	YES	YES
PRA	Practices	20%	NO	YES (<=2)	YES	NO
<b>FINAL_MARK=30% P1+50% P2+20% PRA</b> To pass the subject, it is necessary that FINAL_MARK is greater than or equal to 5.						
In the case of not passing the subject there is the option of recuperating it separately for each of the two parts. In this case, the mark is calculated as following: N_rec_P1: recuperation mark of first partial exam N_rec_P2: recuperation mark of second partial exam <b>FINAL_MARK = 30% N_rec_P1 + 50% N_rec_P2 + 20% PRA</b>

## Adaptations to the contents due to COVID-19

Due to the adaptation of the teaching to the state of alarm, a week less will be devoted to the arithmetic processing topic, from which it will be skipped the Binary division algorithms section.

## Adaptations to the methodology due to COVID-19

Classes will take place synchronously through videoconference in the schedule time of big group (Theory group). The hours dedicated to the medium group (Pralab), are compensated with the following complementary material provided in the space of the subject in the virtual campus.

- Slides documented with explanations of the topic.
- Previous recording, in the videoconference space, of the contents of the session of big group.
- List of exercises with solutions.

## Adaptations to the development plan due to COVID-19

Due to the adaptation of the teaching to the state of alarm, a week less will be devoted to the arithmetic processing topic, from which it will be skipped the Binary division algorithms section.

## Adaptations to the evaluation due to COVID-19

The evaluation process will continue to have the same activities with the same Weighing.

The only difference will be the way to do evaluation activities. These will take place in a virtual shape, while there is not the possibility to do them in a presently manner.
