

Universitat de Lleida

DEGREE CURRICULUM
ARTIFICIAL INTELLIGENCE

Coordination: ANSOTEGUI GIL, CARLOS JOSE

Academic year 2022-23

Subject's general information

Subject name	ARTIFICIAL INTELLIGENCE		
Code	102020		
Semester	1st Q(SEMESTER) CONTINUED EVALUATION		
Typology	Degree	Course	Character
	Bachelor's Degree in Computer Engineering	3	COMPULSORY
	Double bachelor's degree: Degree in Computer Engineering and Degree in Business Administration and Management	4	COMPULSORY
	Master's Degree in Informatics Engineering		COMPLEMENTARY TRAINING
Modality	Attendance-based		
Course number of credits (ECTS)	6		
Type of activity, credits, and groups	Activity type	PRALAB	TEORIA
	Number of credits	3	3
	Number of groups	2	1
Coordination	ANSOTEGUI GIL, CARLOS JOSE		
Department	COMPUTER SCIENCE AND INDUSTRIAL ENGINEERING		
Teaching load distribution between lectures and independent student work	6 ECTS = 25*6 = 150 working hours. 40% --> 60 in-class hours. 60% --> 90 autonomous work hours.		
Important information on data processing	Consult this link for more information.		
Language	Catalan / Spanish		

Teaching staff	E-mail addresses	Credits taught by teacher	Office and hour of attention
ALÒS PASCUAL, JOSEP	josep.alos@udl.cat	3	
ANSOTEGUI GIL, CARLOS JOSE	carlos.ansotegui@udl.cat	0	
TORRES MONTIEL, EDUARD	eduard.torres@udl.cat	6	

Subject's extra information

For questions or related issues, it is recommended to send an email to the teachers of the subject.

Learning objectives

- Design, implement and evaluate uninformed and informed search algorithms describing space and time complexities.
- Select and implement heuristic and evaluation functions for search algorithms.
- Apply and evaluate complete and incomplete solvers for the satisfiability and maximum satisfiability problems.
- Evaluate and implement algorithms for supervised and unsupervised learning.
- Select the most appropriate technique of supervised learning for a given domain.
- Model decision and optimization problems with the language of propositional logic.
- Abstract and represent search problems.
- Optimize implementations of search algorithms.
- Optimize encodings into the SAT and MaxSAT formalisms.
- Optimize implementations of supervised learning algorithms.
- Write documents describing the architecture, design and implementation of a component of an intelligent system.

Competences

Degree-specific competences

- GII-CRI15: Knowledge and application of the main principles and basic techniques of intelligent systems and their practical application.

Degree-transversal competences

- EPS12: Be motivated by quality and continual improvement.
- EPS6: Capacity of analysis and synthesis.

Subject contents

The course content is as follows:

1. Introduction to artificial intelligence
2. Search algorithms and basic schemes: uninformed and informed search
 - Uninformed search: DFS, BFS, IDS
 - Informed search: UCS, BestH, A*
3. Constraint Programming: Satisfiability and Maximum Satisfiability
 - Modelling problems as MaxSAT instances
 - Solvers for MaxSAT instances
4. Machine Learning: supervised and unsupervised
 - Supervised learning: Bayesian learning, decision trees
 - Unsupervised learning: hierarchical clustering, k-means.

Methodology

Every week the student attends to a 2-hour Large Group class and to a 2-hour Middle Group class.

Medium Group classes take place in a laboratory.

In Large Group classes we present the topics listed into the contents section. They incorporate illustrative examples and problems to be solved in the laboratory classes.

In Medium Group classes we present problems and the proposed solutions are discussed .

In Medium Group classes we also present and discuss the lab exercises to be done.

The theoretical classes In laboratory classes the proposed problems are resolved. The algorithms presented in the lecture are also implemented. In a first phase, the student watches the teacher how to implement an algorithm and how to evaluate its correctness and efficiency. In a second phase the student begins to solve the current laboratory activity.

The autonomous work of the student consists of solving the proposed problems and lab exercises.

The programming language is Python. Code quality is an important aspect .

Development plan

Week	Description	Classroom Activity GG	Classroom Activity GM	Autonomous work activity
1	Introduction to artificial intelligence	T1- Introduction to artificial intelligence	Course introduction Tutorial python	Consult bibliography, program, and python tutorial
2	Uninformed search	T2- Search algorithms	Tutorial Python Presentation of Practice1 (P1)	Python tutorial

3	Uninformed search	HOLIDAY	Problems T2	P1 Problems T2
4	Informed search	T2- Search algorithms	P1	P1 Problems T2
5	Informed search	T2- Search algorithms	HOLIDAY	P1 Problems T2
6	Informed Search	T2- Search algorithms	P1	P1 Problems T2
7	Maximum Satisfiability	T3- Constraint Programming	P1	P2 Problems T3
8	Maximum Satisfiability	T3- Constraint Programming	Delivery P1 Presentation of Practice2 (P2) P2 Resolution of doubts T2-T3	P2 Problems T3
9		1st Partial		Study
10	Maximum Satisfiability / Supervised Learning	T4- Aprentatge automàtic	P2 Problems T3	P2 Problems T3
11	Supervised Learning	T4- Automatic Learning	Delivery P2 Presentation of Practice3 (P3)	P3 Problems T4
12	Supervised Learning	T4- Automatic Learning	P3 Problems T4	P3 Problems T4
13	Supervised Learning	T4- Automatic Learning	HOLIDAY	P3 Problems T4
14	Unsupervised Learning	T4- Automatic Learning	P3 Problems T4	P3 Problems T4
15	Unsupervised Learning	HOLIDAY	Delivery P3 Resolution of doubts T3-T4	Problems
16		2nd Partial		Study
17		2nd Partial		Study

Evaluation

Table. Assessment Activities

Acr.	Assessment activity	Weighting	Minimum Grade	In Group	Mandatory	Recoverable
PE1	<i>1st Partial Exam</i>	25%	NO	NO	NO	NO
PE2	<i>2nd Partial Exam</i>	25%	NO	NO	NO	NO
P1	<i>Practice 1</i>	20%	NO	YES (<=2)	NO	NO

P2	Practice2	10%	NO	YES (<=2)	NO	NO
P3	Practice3	20%	NO	YES (<=2)	NO	NO
PCL	Class Participation	0.5 points	NO	NO	NO	NO
Final grade = 0,25*PE1 + 0,25*PE2 + 0,2*P1 + 0,1*P2 + 0.2*P3 + 0,05*PCL						

Activity Written exam

Week 9

Percentage 25% **Type** Compulsory / Individual

Evaluation:

The activity will be evaluated over 10 points.

Objectives

- Design, implement and evaluate uninformed and informed search algorithms describing space and time complexities.
- Select and implement heuristic and evaluation functions for search algorithms.
- Abstract and represent search problems.
- Evaluate uninformed and informed search algorithms describing their space and time complexities

Activity Written exam

Weeks 16-17

Percentage 25% **Type** Individual

Evaluation:

The activity will be evaluated over 10 points.

Objectives

- Apply and evaluate complete and incomplete solvers for the satisfiability and maximum satisfiability problems.
- Evaluate complete and incomplete solvers for the satisfiability and maximum satisfiability problems.
- Model decision and optimization problems with the language of propositional logic.
- Evaluate and implement algorithms for supervised and unsupervised learning.
- Select the most appropriate technique of supervised learning for a given domain

Activity Laboratory activity

Week 8

Percentage 20% **Type** Individual or Group

Evaluation:

The activity will be evaluated over 10 points.

Objectives

- Design, implement and evaluate uninformed and informed search algorithms describing space and time complexities.
- Select and implement heuristic and evaluation functions for search algorithms.
- Evaluate uninformed and informed search algorithms describing their space and time complexities
- Write documents describing the architecture, design, and implementation of a component of an intelligent system.

Activity Laboratory activity

Week 11

Percentage 10% **Type** Individual or Group

Evaluation:

The activity will be evaluated over 10 points.

Objectives

- Apply and evaluate complete and incomplete solvers for the satisfiability and maximum satisfiability problems.
- Model decision and optimization problems with the language of propositional logic.
- Write documents describing the architecture, design, and implementation of a component of an intelligent system.

Activity Laboratory activity

Week 15

Percentage 20% **Type** Individual or Group

Evaluation:

The activity will be evaluated over 10 points.

Objectives

- Evaluate and implement algorithms for supervised and unsupervised learning.
- Select the most appropriate technique of supervised learning for a given domain
- Write documents describing the architecture, design, and implementation of a component of an intelligent system.

- Artificial Intelligence: A Modern Approach
