Universitat de Lleida

DEGREE CURRICULUM
CONCURRENT AND PARALLEL SYSTEMS

Coordination: CORES PRADO, FERNANDO

Academic year 2016-17

CONCURRENT AND PARALLEL SYSTEMS 2016-17

Subject's general information

Subject name	CONCURRENT AND PARALLEL SYSTEMS
Code	102022
Semester	1st Q(SEMESTER) CONTINUED EVALUATION
Typology	(see table below)

Degree	Course	Typology	Modality
Double bachelor's degree: Degree in Computer Engineering and Degree in Business Administration and Management	4	COMPULSORY	Attendance-based
Bachelor's Degree in Computer Engineering	3	COMPULSORY	Attendance-based
Master's Degree in Computer Engineering		COMPLEMENTARY TRAINING	Attendance-based

ECTS credits	6
Groups	1GG,2GM
Theoretical credits	3
Practical credits	3
Coordination	CORES PRADO, FERNANDO
Department	INFORMATICA I ENGINYERIA INDUSTRIAL
Teaching load distribution between lectures and independent student work	6 ECTS = 25x6 = 150 hours 40% -> 60 classroom hours 60% -> 90 hours of autonomous student work
Important information on data processing	Consult this link for more information.
Language	Preferably in Spanish, in English if there are a foreign student.
Office and hour of attention	Monday 16h-17h (s3/17) Thursday 12h-13h (s3/17)

CONCURRENT AND PARALLEL SYSTEMS 2016-17

Teaching staff	E-mail addresses	Credits taught by teacher	Office and hour of attention
CORES PRADO, FERNANDO	fcores@diei.udl.cat	9	To be arranged by email

Subject's extra information

The course is eminently practical, so we give more weight to the practical and programming. Basically we work with two languages, C programming for concurrent execution threads and Java to introduce high-level APIs for synchronization and concurrent patterns. None of these languages will be explained from scratch, because both C and Java have already seen in previous subjects of the degree. To continue the course is essential for students to have good fundamentals in C and Java programming. In the course it is assumed that students are able to design, develop and debug sequential applications of medium difficulty without much trouble.

Learning objectives

- To understand the importance of concurrent programming in actual applications.
- To identify the main characteristics of the different types of concurrent systems.
- To know and understand the problems derived from the development of concurrent programs that do not appear in sequential programming.
- To understand the concepts of synchronization and mutual exclusion between processes.
- To identify the security properties and vivacity that a concurrent system must meet and be able to reason if these properties are met.
- To gain experience and knowledge in communication and synchronization mechanisms that are used today to develop concurrent programs for both shared memory systems to distributed systems.
- To understand the operation of semaphores and monitors as synchronization mechanisms for shared memory; and understand how we can solve problems of concurrent programming using monitors.
- To apply methodologies of software engineering in the development of concurrent and parallel applications.

Competences

Cross-disciplinary Competences:

- EPS7. Capacity to work in situations with a lack of information and/or under pressure.

Specific Competences:

- GII-CRI11. Knowledge and application of the characteristics, functionalities and structure of the Distributed Systems, the Networks of Computers and Internet and design and implement applications based in them.
- GII-CRI14. Knowledge and application of the basic principles and basic techniques of the parallel, concurrent, distributed and of real time programming.
- GII-CRI16. Knowledge and application of the principles, methodologies and life cycle of the software engineering.

Subject contents

1. **Introduction to the concurrency**
   1. Concurrency definition
   2. Need and benefits of concurrent programming
   3. Concurrent hardware architectures
   4. Features of concurrent systems

5. Concurrent programs Specification
    1. Conditions of Bernstein
    2. Concurrency Table
    3. Precedence Graphs
6. How to express concurrency
    1. Cobegin/Coend
    2. Fork/Join
    3. Unix + C
    4. Examples
7. Case study: Linux and Java threads

2. **Design concurrent and parallel applications**
    1. Model of concurrent/parallel programming
    2. Efficiency of concurrent/parallel programs
        1. Scope of parallelism
        2. Granularity
        3. Location
    3. Design of concurrent programs
        1. Stages of Design
        2. Task decomposition techniques
        3. Parallel design patterns
        4. Distribution and communication of tasks
    4. Case studies

3. **Synchronization of concurrent processes**
    1. Synchronization Introduction
        1. Race conditions
    2. The problem of mutual exclusión
        1. Software Solutions
        2. Hardware Solutions
    3. Conditional synchronization
        1. Classical problems of synchronization
    4. Case Study:
        1. Pthread mutex and condition variables
        2. Java Synchronization

4. **High-level APIs for concurrency and synchronization**
    1. Monitors
    2. Patterns concurrent
    3. Case Study:
        1. Boost Library
        2. Concurrent Java API

Methodology

Big-size Group: Theory Sessions (3 credits)

- Lecture: classes based on notes and transparencies where the concepts of the subject will be presented.
- Problems: The concepts of the subject will work through a series of exercises to be resolved collaboratively and help assimilate key concepts.
- Use Cases: It will apply the techniques seen in class to real examples and their impact on application performance will be analyzed.

Mid-size group: Problems /Laboratory Sessions (3 credits)

- Tutorials and personalized monitoring by groups of practices.
- Laboratory: technologies and APIs concurrent programming will be presented and worked through tutorials and examples.
- Problems: Making and correcting exercises related to both the theoretical and practical part of the course.

Autonomous work:

- The homework exercises and practices will be completed outside of class time.

Development plan

Week	Description	Classroom Activity GG	Classroom Activity GM	Autonomous work activity
1	Presentation Concurrency Introduction	Subject presentation T1: Concurrency Introduction	**L1: Posix Threads**	**Study literature and the program**
2	Concurrency Introduction	T1: Concurrency Introduction	**L1: Posix Threads L2: Java Threads** Practice 1: Presentation	T1: Concurrency Introduction
3	Concurrency Introduction	T1: Concurrency Introduction T2: Design of concurrent applications	**L2: Java Threads HOLIDAY GMA**	Practice1 Problems: Concurrency
4	Design of concurrent applications	T2: Design of concurrent applications	P1 Cont. Assessment Problem Problems: Concurrency introduction	Practice 1 Problems: Concurrency
5	Design of concurrent applications	**HOLIDAY**	P1 Cont. Assessment Correction	Practice 1 T2: Design
6	Design of concurrent applications	T2: Design of concurrent applications	Problems: Design	Practice 1 Problems: Design
7	Design of concurrent applications Synchronization	T2: Design of concurrent applications T3: Synchronizing concurrent processes	Practice 1: Delivery Problems: Design	T3: Synchronization
8	Synchronization	T3: Synchronizing concurrent processes	Problems: Synchronization	T3: Synchronization
9		**1er Partial**		Study
10	Synchronization	T3: Synchronizing concurrent processes	**L3: Linux synchronization** Practice 2: Presentation	Practice 2 T3: Synchronization
11	Synchronization	T3: Synchronizing concurrent processes	**L4: Sincronización Java**	Practice 2 Problems: Synchronization

12	Synchronization	T3: Synchronizing concurrent processes	Problems: Synchronization P1 Cont. Assessment Problem	Practice 2 Problems: Synchronization
13	Concurrency & synchronization High-level APIs	T4: High-level APIs for concurrency and Synchronization	Practice 2: Delivery **HOLIDAY GMA**	Problems: Synchronization T4: High-level APIs

15	Concurrency & synchronization High-level APIs	T4: High-level APIs for concurrency and Synchronization	Practice 3: Delivery	Practice 3 T4: High-level APIs
16		**2nd Partial**		Study
17		**2nd Partial**		Study
18		TUTORIAS		
19		**Recovery**		Study

Evaluation

Table. Assessment Activities

Acr.	Assessment activity	Weighting	Minimum Grade	In Group	Mandatory	Recoverable
P1	*1st Partial Exam*	25%	4	NO	YES	YES
P2	*2nd Partial Exam*	25%	4	NO	YES	YES
PRA	*Practices*	40%	5	YES (<=2)	YES	1 PRA
PRB	*Problems*	10%	NO	YES (<=2)	NO	NO
PCL	*Class participation*	1 point	NO	NO	NO	NO
There are minimum mark of 4 in the average of the written tests in order to have final note of the subject. It must be approved all practices individually. A practice is considered suspended if fails to reach 4.						
FinalGrade = 0,25*P1 + 0,25*P2 + 0,4*PRA + 0,1*PRB + 0,1*PCL						

The course will be approved with a final grade at least of 5 and having completed all laboratory practices (each with at least 4 grade)

The final grade for the course is derived from the weighted sum of the grades of the 2 tests and the practical marks, plus the class participation and continuous assessment.

The course has two sets, each with a weight of 25% of the final grade. These tests are mandatory and the approved ones will not be revalue in the recovery exams.

The completion and improvement of laboratory practices is mandatory to pass the course. The practices will be evaluated with a note that represents 40% of the final grade for the course. The copy of any of the practices of the

course will involve suspend all practice and the subject.

There minimum mark of 4 in the middle of the written tests to obtain the final grade for the course.

There is also a high note (5) to the labs. A practice is considered suspended if fails to arrive to mark of 4.
