

Universitat de Lleida

DEGREE CURRICULUM  
**ENTERPRISE SOFTWARE  
ARCHITECTURES**

Coordination: GARCIA GONZALEZ, ROBERTO

Academic year 2017-18

## Subject's general information

<b>Subject name</b>	ENTERPRISE SOFTWARE ARCHITECTURES			
<b>Code</b>	102029			
<b>Semester</b>	2nd Q(SEMESTER) CONTINUED EVALUATION			
<b>Typology</b>	Degree	Course	Typology	Modality
	Bachelor's Degree in Computer Engineering	4	COMPULSORY	Attendance-based
<b>ECTS credits</b>	9			
<b>Groups</b>	1GG,1GM			
<b>Theoretical credits</b>	3			
<b>Practical credits</b>	6			
<b>Coordination</b>	GARCIA GONZALEZ, ROBERTO			
<b>Department</b>	INFORMATICA I ENGINYERIA INDUSTRIAL			
<b>Teaching load distribution between lectures and independent student work</b>	Total load: 225h - Lectures (40%) = 90h - Independent student work (60%) = 135h			
<b>Important information on data processing</b>	Consult <a href="#">this link</a> for more information.			
<b>Language</b>	English			
<b>Office and hour of attention</b>	To be agreed, contact rgil@diei.udl.cat, rgarcia@diei.udl.cat or jvirgili@diei.udl.cat			

Teaching staff	E-mail addresses	Credits taught by teacher	Office and hour of attention
GARCIA GONZALEZ, ROBERTO	roberto.garcia@udl.cat	5,4	EPS-3.15, please schedule your meeting by e-mail
GIL IRANZO, ROSA MARÍA	rgil@diei.udl.cat	1,8	EPS-3.15, please schedule your meeting by e-mail
PROFESSOR PENDENT D'ASSIGNAR DIEI		3,6	

## Subject's extra information

To properly follow this subject, it is recommended to have consolidated software engineering and Web applications development skills like those presented in the Software Engineering and Web Systems and Technologies courses.

## Learning objectives

- To present Web engineering and its fundamental applications patterns and architectures in the context of an agile methodology and Behaviour Driven Development.
- To have a global vision of the existent technologies to implement enterprise applications using the previous patterns and architectures, especially Java, Javascript and the Web.
- To put into practice the previous concepts and technologies through the development of a Web application project using Java (Spring) and TypeScript (Angular), following an agile methodology and behaviour driven development (BDD).

## Competences

### Strategic Competences

**CT2.** Mastering a foreign language, especially English.

**CT3.** Training Experience in the use of the new technologies and the information and communication technologies.

### Cross-disciplinary Competences

**EPS11.** Capacity to understand the needs of the user expressed in a no technical language.

### Specific Competences

**GII-TI1.** Capacity to understand the environment and needs of an organisation in the field of the information and communication technologies.

**GII-TI2.** Capacity to choose, design, deploy, integrate, evaluate, build, manage, explode and keep the hardware, software and network technologies inside the cost and quality requirements.

**GII-TI5.** Capacity to select, deploy, integrate and manage systems of information that satisfy the needs of the organisation, within the cost and quality requirements.

**GII-TI6.** Capacity to conceive systems, applications and services based in network technologies, including Internet, web, e-commerce, multimedia, interactive services and mobile computation.

## Subject contents

1. Agile Web Applications Development Process
  1. Behaviour Driven Development (BDD) with Cucumber Java
  2. Scrum using ZenHub
  3. Teamwork coordination using Version Control
  4. Continuous Integration using TravisCI
  5. Automated deployment using Heroku
2. Application Architecture Patterns
  1. Introduction and layered architecture
  2. Patterns in the domain layer
  3. Patterns in the integration layer
  4. Patterns in the presentation layer
  5. Technologies for pattern application
3. Web Application Implementation
  1. Server side: Java (Spring)
  2. Client side: TypeScript (Angular)

## Methodology

The methodology is based on a Project Based Learning approach where an enterprise software application is developed, focusing on Web-based applications. The course starts with a review of Web development frameworks from an industrial point of view analysing the number of job offers, StackOverflow questions, LinkedIn mentions, etc. Based on these dimensions, Spring is selected for the server side and Angular for the client one.

The first weeks of the course focus on fundamental aspects of software development, including project management ideas and development process concepts. Software architecture, specification, analysis and design are presented from a client/server and Web perspective, guided by enterprise application patterns. These concepts are the starting point for the students project development.

The students select a project, under professors guidance, and complete a first deliverable where they apply these fundamental concepts to specify, analyse and design their project.

The rest of the course focuses on the implementation of the defined project and the required concepts related to agile software development, Spring or Angular are introduced as needed to complete the development of the project.

## Development plan

Week	Description	Face-to-Face Activities	Autonomous Student Work
1	Frameworks and Methodologies	Study Frameworks JVM Servidor Study Frameworks JavaScript Cliente	Define project idea
2	Frameworks and Methodologies	Introduction Agile Methodologies SRUM and BDD	Define project using methodology terms
3	Sprint 1	Tutorials presentations Joint project development	Project development

Week	Description	Face-to-Face Activities	Autonomous Student Work
4	Sprint 1	Tutorials presentations Joint project development	Project development
5	Sprint 1	Tutorials presentations Joint project development	Project development
6	Sprint 1	Enterprise Application Patterns Joint project development	Study patterns application to project
7	Sprint 1	Enterprise Application Patterns Sprint Retrospective	Study patterns application to project
8		Holidays	
9	Sprint 2	Tutorials presentations Joint project development	Project development
10		1st Midterm Exam	Study
11	Sprint 2	Tutorials presentations Joint project development	Project development
12	Sprint 2	Tutorials presentations Joint project development	Project development
13	Sprint 2	Joint project development Sprint Retrospective	Project development
14	Sprint 3	Tutorials presentations Joint project development	Project development
15	Sprint 3	Tutorials presentations Joint project development	Project development
16	Sprint 3	Joint project development Sprint Retrospective	Project development
17-18		2nd Midterm Exam	Study

## Evaluation

Acr.	Evaluation Activity	Rate	Minimum Qualification	Group Activity	Mandatory	Remedia Exam
P1	1st Midterm Exam	20%	NO	NO	YES	NO
P2	2nd Midterm Exam	20%	NO	NO	YES	NO
E1	1st Project Deliverable	20%	NO	1 or 2	YES	NO
E2	2 <sup>a</sup> Project Deliverable	20%	NO	1 or 2	YES	NO
E3	3 <sup>a</sup> Project Deliverable	20%	NO	1 or 2	YES	NO
Final Qualification = $0,2 \cdot P1 + 0,2 \cdot P2 + 0,2 \cdot E1 + 0,2 \cdot E2 + 0,2 \cdot E3$						

The evaluation is fundamentally based on the development of a project following an agile methodology following 6 sprints and 3 deliverables:

- Sprints 1, 1st Deliverable: 20% grade
- Sprints 2, 2nd Deliverable: 20% grade
- Sprints 3, 3rd Deliverable: 20% grade

For each sprint (review), the performance in developing the assigned tasks will be evaluated, which will be contextualised for each corresponding deliverable that takes into account also the developed product. The grade will combine the outcomes for each deliverable together with its associated sprints.

The evaluation is complemented with two exams performed individually:

- 1st Midterm Exam: 20% grade, about fundamental aspects of the frameworks and methodologies used so far.
- 2nd Midterm Exam: 20% grade, about the development experience of the project as a whole.
