

Universitat de Lleida

# DEGREE CURRICULUM **NETWORKED COMPUTING PLATFORMS**

Coordination: SENDIN VELOSO, MONTSERRAT

Academic year 2023-24

## Subject's general information

Subject name	NETWORKED COMPUTING PLATFORMS			
Code	102030			
Semester	2nd Q(SEMESTER) CONTINUED EVALUATION			
Typology	Degree	Course	Character	Modality
	Bachelor's Degree in Computer Engineering	4	COMPULSORY	Attendance-based
	Bachelor's Degree in Computer Engineering	4	OPTIONAL	Attendance-based
Course number of credits (ECTS)	6			
Type of activity, credits, and groups	Activity type	PRALAB		TEORIA
	Number of credits	3		3
	Number of groups	1		1
Coordination	SENDIN VELOSO, MONTSERRAT			
Department	COMPUTER ENGINEERING AND DIGITAL DESIGN			
Teaching load distribution between lectures and independent student work	– Independent student work (70%) = 105h – Presential work (30%) = 45h			
Important information on data processing	Consult <a href="#">this link</a> for more information.			
Language	Preferably Catalan (Spanish if any student shows difficulties with Catalan).			

Teaching staff	E-mail addresses	Credits taught by teacher	Office and hour of attention
SENDIN VELOSO, MONTSERRAT	montse.sendin@udl.cat	6	

## Subject's extra information

This subject is located in the 2nd semester of the forth course. Belongs to the specialization module 'Information Technologies'. It can be considered as a continuation of the subject 'Applications for Mobile Devices'.

So, to follow this subject properly some previous knowledge in Android programming is recommended (essential aspects covered in the previous subject), and preferently in Kotlin.

## Learning objectives

- Being able to conceive, design your own development and adequately describe the functionality of a certain app, exploiting their possibilities of mobile computing
- Deepen the Android platform and elements that comprise it
- Consider diverse cost and quality parameters (battery consumption and other resources)
- Managing the data provided by sensors of a device
- Knowing some of the most used API related to location
- Knowing the most used options for connecting to the network
- Solve the user management (authentication) against a backend based on *Cloud Computing*
- Synchronize simple data with based on *Cloud Computing*
- Solve functionality related with simple data changes (listeners) on a backend based on *Cloud Computing*
- Organize structured data and solve queries more complex in an effective manner
- Implement the necessary infrastructure for sending push notifications from a backend based on *Cloud Computing*
- Combine and communicate correctly the frontend of and app with Synchronize simple data with based on *Cloud Computing*

## Competences

### Strategic Competitions of the UdL

**CT2.** Mastering a foreign language, especially English.

**CT3.** Training Experience in the use of the new technologies and the information and communication technologies.

### Specific Competitions

**GII-TI4.** Capacity to choose, design, deploy, integrate and manage networks and infrastructures of communications in an organisation.

**GII-TI5.** Capacity to select, deploy, integrate and manage systems of information that satisfy the needs of the organisation, within the cost and quality requirements.

**GII-TI6.** Capacity to conceive systems, applications and services based in network technologies, including Internet, web, e-commerce, multimedia, interactive services and mobile computation.

**GII-TI7.** Capacity to comprise, apply and manage the computer systems guarantee and security.

## Cross-disciplinary competitions

**EPS11.** Capacidad de comprender las necesidades del usuario expresadas en un language no técnico

## Subject contents

1. Sensor management
  - 1.1. Introduction
  - 1.2. The Android Sensor Framework
  - 1.3 Good practices for accessing and using sensors
  - 1.4. Particularities for specific sensors
  - 1.5. Special considerations on Location
  - 1.6. Mapping
  - 1.7. Geofences
  - 1.8. Activity Recognition
  - 1.9. Other
2. Basic networking in Android
  - 2.1. Available APIs
  - 2.2. Networking basics
  - 2.3. Good practices
3. *Firebase*: a specific platform for mobile development based on *Cloud Computing*
  - 3.1. Preliminar notions on *Cloud Computing* and *Firebase*
  - 3.2. Preparing and configuring Firebase on Android apps
  - 3.3. Introduction to *Firebase Authentication*
  - 3.4. Introduction to *Firebase Realtime DDBB*
  - 3.5. Introduction to *Firebase Firestore*
  - 3.6. Introduction to *Firebase Cloud Storage*
  - 3.7. Preparing the infrastructure for enabling Push notifications: *Firebase Cloud Messaging*
  - 3.8. Responding to events and invoking functionality in the backend: *Firebase Cloud Functions*

## Methodology

### Presential Part (class sessions)

- Theoretical-Practical classes.
- *Project-Based learning* and *Active Learning*.
- Participatory and dynamic sessions.
- It is worked with examples and small projects (*Mini-Activities*), to be proposed and solved regularly.
- Put into practice of concepts through the development of a project (*Course project*).

### Non Presential Part (autonomous work)

- The *Course project* will be developed on your own.
- **The student will have to** deepen the study of the various topics on their own, as well as the exploration of the various options that are presented.
- In developing the **course project**, students must develop **critical thinking** in order to select and reasonably justify their decision making.

As the subject is eminently practice, the **avaluation system** (detailed in el corresponding section) is composed of different practices timely scheduled (preferently to be developed in groups of two people).

### SOFTWARE to be used:

- **Android Studio** (trying to maintain the last version of the environment and libraries), with diverse **emulators**, as well as the possibility to use an Android personal device.

## Development plan

Week	Laboratory addressed session - Theorical part (BsG)	Laboratory addressed session - Practical part (BsG)	Autonomous work
1	Subject presentation T1: Sensor management	<i>Course project</i> conception and gestation	Autonomous learning and <i>Course project</i> gestation
2	T1: Sensor management	Delivery 1 <i>Course project</i> development <i>MiniActiv-1</i> : Good practices in sensors usage	Autonomous learning, <i>Course project</i> gestation and <i>MiniActiv-1</i> completion
3	T1: Sensor management	Delivery 1 <i>Course project</i> development <i>MiniActiv-2</i> : Receiving periodic updates from Location	Autonomous learning and <i>MiniActiv-2</i> completion
4	T1: Sensor management	Delivery 1 <i>Course project</i> completion <i>MiniActiv-3</i> : Preparing and extending <i>HelloMap</i>	Autonomous learning, <i>MiniActiv-3</i> completion and app. eskeleton starting Delivery 1 <i>Course project</i>
5	T1: Sensor management		Autonomous learning and app skeleton development
6	T2: Basic networking in Android		Autonomous learning and app skeleton development.
7	T2: Basic networking in Android	<i>MiniActiv-4</i> : Network basic operations	Autonomous learning and app. skeleton development

8	T3: Specific platform for mobile development based on <i>Cloud Computing</i>		Autonomous learning, <i>MiniActiv-4</i> completion and app. skeleton development
9	Midterm exam week		App. skeleton completion
10	T3: Specific platform for mobile development based on <i>Cloud Computing</i>	Delivery 2 <i>Course project</i> development	Autonomous learning and app muscle starting Delivery 2 <i>Course project</i>
11	T3: Specific platform for mobile development based on <i>Cloud Computing</i>		Autonomous learning and app muscle development
12	T3: Specific platform for mobile development based on <i>Cloud Computing</i>		Autonomous learning and app muscle development
13	T3: Specific platform for mobile development based on <i>Cloud Computing</i>		Autonomous learning and app muscle development
14	T3: Specific platform for mobile development based on <i>Cloud Computing</i>		Autonomous learning and Delivery 3 <i>Course project</i> development
15	T3: Specific platform for mobile development based on <i>Cloud Computing</i>	Delivery 3 <i>Course project</i> development	Delivery 3 <i>Course project</i>
16	2nd midterm week. Validation exam		<i>Course project</i> presentation preparation
17	2nd midterm week		<i>Course project</i> presentation
18	Tutorials		
19	Recovery		
20	Personalized interview (if Delivery 3 <i>Course project</i> is below the minimum mark required)		

## Evaluation

Activt. Blocks	Description	Weight	Minimum Grade	In group	Presential	Mandatory	Recoverable
BlocI-MiniActivs	Pack of Mini-activities	15%	No	Yes	Yes (50%)	No	No
BlocII-Proj	Course project	85%	5,0	Yes	No	Yes	Yes

**Final grade** = 0,15 \* BlocI-MiniActivs + 0,85 \* BlocII-Proj

- Subject is passed if **final grade** is greater or equal than **5,0**, as well as in the final mark of the *Course project*. The last delivery of the *Course project* (weighted in 35%) also has a **minimum grade** of 4.0.

### Other considerations and criteria

- Pack of mini-activities (*BloqI-MiniActivs*):
  - Continuous work during 1st midterm class sessions. Contents of the 2nd midterm are applied directly to the *Course project*.

- *Objective*: put into practice *in-situ* new contents introduced in class.
- *Delivery*: via CV and presentially (preferibly during the class).
- *Evaluation*: up to 1,5 points (until 2,25 points if *optional parts* -0,75 points over the mark)
- Course project (*BloqII-Proj*):
  - Conception, design and development of an Android app in which to put in practical the contents studied in the subject (sensors management, Cloud connection)
  - Articulated in 3 deliveries
    - *Weight and calendar of each delivery*:
      - *1st Delivery*. App gestation: 4th week (10% of the final mark)
      - *2nd Delivery*. App central core (eskeleton): 8th week (25%)
      - *3th Delivery*. Additional functionality (muscle) with cloud synchronization: 14th week (35%)
      - *Final project oral presentation* (15%)
        - To be realized the 2nd midterm exam day.
  - *Evaluation and recovery system*: continuous evaluation
    - There will be required:
      - Correction criteria and minimal requirements to be developed in code, established in advance.
      - Criteria set in the **Manual of good programming practices** will be required, specified as minimum requirements to fulfill.
      - Also additional requirements, which will be considered as extra points in the grade.
    - Students receive feedback according to the fulfillment of the established requirements.
      - *2nd delivery*: Possibility to improve through 3rd delivery. Application of a **correction factor of 0,75**.
      - *3rd delivery*: Possibility to improve through the presentation, in order to bring improvements. Additionally, a personalized interview during the 18th week, if doubtful cases.
- For all activities: programmed deliveries, unmovable dates.
- **Alternative Evaluation**:
  - The Course project (*BloqII-Proj*) could be delivered at the end of the semester, on a unique delivery.
  - The Pack of Mini-activities (*BloqI-MiniActivs*) is not imprescindible.
