## Subject's extra information

*The following course is highly recommended:*

- Computational Models and Complexity

## Learning objectives

The learning objectives of the course are:

- Learning the levels, techniques, and algorithms involved in the translation process of programming languages,
- Using the tools to support the design and implementation of each level.
- Analyzing the main features and implementation techniques associated with non-imperative languages as logical, functional, scripting, object-oriented and distributed and concurrent languages.

## Competences

### Strategic competences of the University of Lleida

- **CT3.** Training Experience in the use of the new technologies and the information and communication technologies.
- **CT2.** Mastering a foreign language, especially English.

### Degree competences

- **EPS6.** Ability of analysis and synthesis.

### Specific Degree competences

- **GII-C2.** Ability to know the theoretical basics of the programming languages and the techniques of lexical, syntactic and associated semantic processing, and know how to apply them for the creation, design and processing of languages.

## Subject contents

### Structure of the course topics:

1. Introduction to programming languages and translation techniques
- 2- Lexical analysis
- 3- Tool: Flex (The Fast Lexical Analyzer)
- 4 - Syntactic analysis: top-down and bottom-up parsers
- 5- Tool: Yacc (Yet Another Compiler Compiler)
- 6- Syntax-directed translation
- 7- Symbol Tables
- 8- Tool: SymTab
- 9- Type checking
- 10- Intermediate representation and code generation
- 11- Runtime Memory Management
- 12- Code optimization
13. Generating object code

## Methodology

The lectures of the course are 4 hours per week of problem solving and laboratory practice, and two hours a week of lecturing which will present more algorithms, techniques and tools for translating each level of the translation process.

Students solve exercises during the laboratory sessions where they will address the presentation of a non-classic programming language to the other groups, and implement a compiler.

## Development plan

The syllabus of the course is divided into two parts.

The **first part** deals with the specification and recognition of lexical components of programming languages, the techniques of parsing routines and how to integrate semantic parsing algorithms. The student's training is complemented by the study of specialized tools supporting the design and implementation of specific components or translation systems. The following tools are introduced: JFLAP for specification and recognition of languages, flex for generating lexical analyzers, yacc for generating bottom-up parsers, and SymTab for symbol tables.

The **second part** of the course deals with the levels of semantic analysis, code optimization and object code generation. We show how to incorporate the process of semantic analysis routines that enable scope management, type checking, intermediate code generation for major constructions of imperative languages and memory allocation. Code optimizations dependent of the intermediate representation and machine object code are studied.

Finally, in addition to the traditional imperative languages, we analyze the main features and implementation techniques associated with other languages such as logical, functional, scripting, object-oriented and distributed and concurrent languages. For their study and analysis, students choose a language which will be presented to the rest of the group.

| Week | Description          | Classroom Activity Big Group | Classroom/independent work |
|------|----------------------|------------------------------|----------------------------|
| 1    | Lecture and problems | Lesson 1                     | 6h/9h                      |
| 2    | Lecture and problems | Lesson 2,3                   | 6h/9h                      |
| 3    | Lecture and problems | Lesson 2,3                   | 6h/9h                      |
| 4    | Lecture and problems | Lesson 2,3                   | 6h/9h                      |
| 5    | Lecture and problems | Lesson 4,5                   | 6h/9h                      |
| 6    | Lecture and problems | Lesson 4,5                   | 6h/9h                      |
| 7    | Lecture and problems | Lesson 4,5                   | 6h/9h                      |
| 8    | Lecture and problems | Lesson 4,5                   | 6h/9h                      |
| 9    |                      | <b>First mid-term exam</b>   |                            |
| 10   | Lecture and problems | Lesson 6                     | 6h/9h                      |
| 11   | Lecture and problems | Lesson 7,8                   | 6h/9h                      |
| 12   | Lecture and problems | Lesson 9,10                  | 6h/9h                      |
| 13   | Lecture and problems | Lesson 11,12                 | 6h/9h                      |
| 14   | Lecture and problems | Lesson 13                    | 6h/9h                      |
| 15   | Practices            | Presentation of practices    | 6h/9h                      |
| 16   | Written tests        | <b>Second mid-term exam</b>  |                            |
| 17   | Written tests        | <b>Second mid-term exam</b>  |                            |
| 18   |                      | Study week                   |                            |
| 19   | Written tests        | <b>Recovery exam</b>         |                            |

## Evaluation

| Acronym | Evaluation activities | Weighting | Min. Score | Group work | Compusory | Recuperable |
|---------|-----------------------|-----------|------------|------------|-----------|-------------|
| PR1     | JFLAP                 | 10%       | -          | No         | Yes       | Yes         |
| P1      | Lex                   | 10%       | -          | No         | Yes       | Yes         |
| P2      | Yacc                  | 15%       | -          | No         | Yes       | Yes         |
| P3      | Projecte              | 45%       | -          | Yes        | Yes       | Yes         |
| A1      | Language analysis     | 15%       | -          | Yes        | Yes       | Yes         |
| A2      | Regular expressions   | 5%        | -          | No         | Yes       | Yes         |

The course activities consist of:

- JFLAP: Resolution of a collection of problems of recognition and specification languages ??using the tool

## JFLAP

- Lex: use of automated tools lex lexical analyzer.
- YACC use automatic generation tool yacc parsers.
- Project: Use the tool to implement symbol tables and integration with tools lex and yacc. It is proposed to develop a translator intermediate code (three-addresses) for a small imperative language.
- Language Analysis: Analysis of the characteristics of a programming language is not classical. Implementation issues. Work to be done in groups of two or three people. Oral presentation to the rest of the group.
- Regular Expressions: Regular Expression Activity: Practice exercises performed in a first programming language.
