Universitat de Lleida

DEGREE CURRICULUM

LANGUAGE PROCESSING ALGORITHMS

Coordination: ALSINET BERNADÓ, MARIA TERESA

Academic year 2020-21

Subject's general information

Subject name	LANGUAGE PROCESSING ALGORITHMS
Code	102043
Semester	2nd Q(SEMESTER) CONTINUED EVALUATION

Typology	Degree	Course	Character	Modality
	Bachelor's Degree in Computer Engineering	4	COMPULSORY	Attendance-based

Course number of credits (ECTS)	9

Type of activity, credits, and groups	Activity type	PRALAB	TEORIA
	Number of credits	3.6	5.4
	Number of groups	1	1

Coordination	ALSINET BERNADÓ, MARIA TERESA
Department	COMPUTER SCIENCE AND INDUSTRIAL ENGINEERING
Teaching load distribution between lectures and independent student work	70 hours lectures / 115 hours independent student work
Important information on data processing	Consult this link for more information.
Language	Catalan
Distribution of credits	The classes of the subject are structured in 3 weekly contact hours aimed at solving practical problems in the laboratory and 3 weekly virtual hours of a more expository nature where the algorithms, techniques and translation tools of each stage of the translation process will be presented.

Subject's extra information

The following course is highly recommended:

- Computational Models and Complexity

Learning objectives

The learning objectives of the course are:

- Learning the levels, techniques, and algorithms involved in the translation process of programming languages,
- Using the tools to support the design and implementation of each level.
- Analyzing the main features and implementation techniques associated with non-imperative languages as logical, functional, scripting, object-oriented and distributed and concurrent languages.

Competences

Strategic competences of the University of Lleida

- **CT3.** Training Experience in the use of the new technologies and the information and communication technologies.
- **CT2.** Mastering a foreign language, especially English.

Degree competences

- **EPS6.** Ability of analysis and synthesis.

Specific Degree competences

- **GII-C2**. Ability to know the theoretical basics of the programming languages and the techniques of lexical, syntactic and associated semantic processing, and know how to apply them for the creation, design and processing of languages.

Subject contents

Structure of the course topics:

1. Introduction to programming languages and translation techniques

2- Lexical analysis

3- Tool: Flex (The Fast Lexical Analyzer)

4 - Syntactic analysis: top-down and bottom-up parsers

5- Tool: Yacc (Yet Another Compiler Compiler)

6- Syntax-directed translation

7- Symbol Tables

8- Tool: SymTab

9- Type checking

10- Intermediate representation and code generation

11- Runtime Memory Management

12- Code optimization

13. Generating object code

Methodology

The classes of the subject are structured in 3 weekly contact hours aimed at solving practical problems in the laboratory and 3 weekly virtual hours of a more expository nature where the algorithms, techniques and translation tools of each stage of the translation process will be presented. .

Students will solve practical exercises during the laboratory sessions and will approach in a group the preparation and presentation of three works:

- Use of regular expressions in programming languages
- Aspects of design and implementation of a particular programming language
- Translator synthesis phase: Memory management in the execution environment and Code optimization

Development plan

The syllabus of the course is divided into two parts.

The **first part** deals with the specification and recognition of lexical components of programming languages, the techniques of parsing routines and how to integrate semantic parsing algorithms. The student's training is complemented by the study of specialized tools supporting the design and implementation of specific components or translation systems. The following tools are introduced: JFLAP for specification and recognition of languages, flex for generating lexical analyzers, yacc for generating bottom-up parsers, and SymTab for symbol tables.

The **second part** of the course deals with the levels of semantic analysis, code optimization and object code generation. We show how to incorporate the process of semantic analysis routines that enable scope management, type checking, intermediate code generation for major constructions of imperative languages and memory allocation. Code optimizations dependent of the intermediate representation and machine object code are studied.

Finally, students choose a topic corresponding to the 2nd part of the subject and present it to the rest of the group, in addition, they choose a programming language and present the main design and implementation characteristics.

Week	Description	Classroom Activity Big Group	Classroom/independent work
1	Lecture and problems	Lesson 1	6h/9h

Week	Description	Classroom Activity Big Group	Classroom/independent work
2	Lecture and problems	Lesson 2,3	6h/9h
3	Lecture and problems	Lesson 2,3	6h/9h
4	Lecture and problems	Lesson 2,3	6h/9h
5	Lecture and problems	Lesson 4,5	6h/9h
6	Lecture and problems	Lesson 4,5	6h/9h
7	Lecture and problems	Lesson 4,5	6h/9h
8	Lecture and problems	Lesson 4,5	6h/9h
9		First mid-term exam	
10	Lecture and problems	Lesson 6	6h/9h
11	Lecture and problems	Lesson 7,8	6h/9h
12	Lecture and problems	Lesson 9,10	6h/9h
13	Lecture and problems	Lesson 11,12	6h/9h
14	Lecture and problems	Lesson 13	6h/9h
15	Practices	Presentation of practices	6h/9h
16	Written tests	Second mid-term exam	
17	Written tests	Second mid-term exam	
18		Study week	
19	Written tests	Recovery exam	

Evaluation

Acronym	Evaluation activities	Weighting	Min. Score	Group work	Compusory	Recuperable
PR1	Lex	15%	-	Yes	Yes	Yes
PR2	Regular expressions	15%	-	Yes	Yes	No
PR3	Yacc	15%	-	Yes	Yes	Yes
PR5	Design and implementation of programming languages	15%	-	Yes	Yes	No
PR4	Project	25%	-	Yes	Yes	Yes
PR5	Synthesis stage	15%	-	Yes	Yes	No

The course activities consist of:

- Lex: use of automated tools lex lexical analyzer.

- Regular expressions: Regular expressions in programming languages. Oral presentation to the rest of the group.
- YACC use automatic generation tool yacc parsers.
- Design and implementation of programming language: Oral presentation to the rest of the group.
- Project: Use the tool SymTab to implement symbol tables and integration with tools lex and yacc. It is proposed to develop a translator intermediate code (three-addresses) for a small imperative language.
- Synthesis stage: Analysis of the characteristics of some synthesis stage. Implementation issues. Oral presentation to the rest of the group.
- Activities are developed in groups of two or three people..
