

DEGREE CURRICULUM PROCESS MODELS

Coordination: GARCIA GONZALEZ, ROBERTO

Academic year 2016-17

Subject's general information

Subject name	PROCESS MODELS					
Code	102054					
Semester	2nd Q(SEMESTER) CONTINUED EVALUATION					
Typology	Degree	Course	Typology	Modality		
	Bachelor's Degree in Computer Engineering	3	COMPULSORY	Attendance- based		
ECTS credits	6					
Groups	1GG					
Theoretical credits	2					
Practical credits	4					
Coordination	GARCIA GONZALEZ, ROBERTO					
Department	INFORMATICA I ENGINYERIA INDUSTRIAL					
Teaching load distribution between lectures and independent student work	6 ECTS x 25h = 150h 40% -> 60h classroom hours (4h per week) 60% -> 90h autonomous work					
Important information on data processing	Consult this link for more information.					
Language	Catalan and English. The materials and resources will be provided in English, but the lectures will be in Catalan. (In English if there are foreign students).					
Office and hour of attention	Make an appointment by email.					

Teaching staff	E-mail addresses	Credits taught by teacher	Office and hour of attention
CORCHERO RODRÍGUEZ, AITOR	aitorcorchero@gmail.com	3	Office 3.03, appointment by email.
GARCIA GONZALEZ, ROBERTO	roberto.garcia@udl.cat	0	Office 3.15, appointment by email.
VIRGILI GOMÀ, JORDI	jvirgili@diei.udl.cat	3	Office 3.03, appointment by email.

Subject's extra information

Course taught during the 2nd semester of 3rd year of the degree. Part of the specialization module in "Software Engineering". To develop good software different techniques and methodologies of project management and software development models should be used. We focus on agile methodologies.

A **Joint Project** is developed together with other subjects in the 3rd course of the "Software Engineering" specialization:

- Quality Management and Improvement
- Process Models
- Requirements Engineering

Each subject focuses on the corresponding aspects of project development. In the case of this subject, project development process. The aim of this **Joint Project** is to bring the students with what would be a real-world project of Software Engineering and at the same time, we see that results of the aspects studied in the contexts of a course serve to meet the challenges presented in other courses.

To follow this subject properly some previous knowledge/skills on programming are recommended. It's not necessary know Python/Django (the language used), but it is necessary previous experience in programming.

Learning objectives

- Learn the basics of Project management.
- Develop a Project charter to plan, execute and monitor a Project.
- Know different models to develop software, specially the agile model.
- Carry out a software development Project following an agile methodology.

Competences

Strategic competences of the UdL

- CT2. Mastering a foreign language, especially English.
- CT3. Training Experience in the use of the new technologies and the information and communication technologies.

Cross-disciplinary competences

EPS11. Capacity to understand the needs of the user expressed in a no technical language...

Specific competences

- GII-IS1. Capacity to develop, maintain and evaluate services and software systems that satisfy all the requirements of the user and behave in a reliable and efficient way, they can develop, keep and fulfil quality requirements, applying the theories, principles, methods and uses of the software engineering.
- GII-IS3. Capacity to give solution to problems of integration taking into account the strategies, standards and available technologies.
- GII-IS4. Capacity to identify and analyse problems and design, develop, implement, verify and find software solutions on the base of a suitable knowledge of the theories, models and current techniques.

Subject contents

- 1 Project Management
 - Basics
 - · Projects within organizations
 - Restrictions
 - · Request and project proposals
 - PMI
- 2 Process Models on software engineering
 - Introduction
 - · Models and methodologies
 - Existing models (features, comparisons...)
 - Introduction to agile methods
- 3 Xtreme Programming
 - Definition and features
 - Pair programming
 - o Pair review
 - Stories
 - · Continuous Integration
 - Test-Driven Development
 - Tests
- 4 Agile project management
 - · Definition and features
 - · Agile methodologies.
 - User Case to User Stories
 - Scrum, Lean IT, Kanban...
- 5 Organizations and negotiation with agile projects

- · Organizational maturity
- · Contracts in agile projects
- 6 Software project development
 - Project charter
 - Budget
 - Kanban
 - · Work planification with Scrum
 - · Project closure
 - Speech

Methodology

Classes for the course include sessions in which the contents are introduced, through support of educational materials prepared or compiled by lecturers, and group work sessions.

In group work sessions, we use project-based learning methodology. So, students must apply several techniques on the subject under the common project to the three courses in the third year of Software Engineering module.

Theory

- Presentation of the contents of the course.
- Discussion with the students.

Laboratory

Laboratory. Demo and tutorial projects.

Joint Project

- Sprint 1. Initial implementation.
- Sprint 2. Iteration over previous work.
- Sprint 3. Final iteration.
- Oral presentation of the project to a committee involving the professors of all 3 subjects. The presentation, common to these subjects, addresses the overall project development.

A note about Joint Project: Every *Sprint* is conducted within the context of a software engineering project developed in three courses (Requirements Engineering, Process Models and Quality Management). Given that each course addresses important aspects of Software Engineering (e.g. requirements, agile methodologies and quality), the project aims to encourage students to deal with them in a real-life scenario, which is simulated in this project.

Development plan

Week	Course Activities	Joint Project Activities	Autonomous Student Work	
1	Presentation, Demo Project	-	-	
2	PMI, Tutorial Project Design	-	Tutorial Project Design	
3	Project Management, Version Control Systems	-	Tutorial Project	
4	Process Models, Test Driven Development	-	-	
5	Agile Development, Tutorial Project Development	-	Tutorial Project	
6	Scrum, Tutorial Project Development	-	Tutorial Project	

7	-	Scrum Planning	Deliver Tutorial Project
8	-	Project Design	-
9	1st Midterm Exam	-	Study
10	-	1st Sprint	-
11	-	1st Sprint	-
12	-	2nd Sprint	-
13	-	2nd Sprint	-
14	-	3rd Sprint	-
15	-	3rd Sprint	-
16-17	1st Midterm Exam	-	Study
18	-	Project Presentation	Presentations Preparation
19	Remedial Exam	-	Study

Evaluation

Acr.	Evaluation Activity	Rate	Minimum Qualification	Group Activicty	Mandatory	Remedial Exam
VP	Tutorial Project (Practice)	10%	NO	2 to 3	NO	NO
VT	Tutorial Project (Theory)	10%	NO	2 to 3	NO	NO
P1	1st Midterm Exam	30%	4	NO	YES	YES
E1	1st Project Deliverable	10%	NO	4 to 6	YES	NO
E2	2a Project Deliverable	10%	NO	4 to 6	YES	NO
E3	3a Project Deliverable	10%	NO	4 to 6	YES	NO
DVQ	Project Technical quality Analysis	10%	NO	4 to 6	YES	NO
FP	Final Presentation	10%	NO	4 to 6	YES	NO
Final	Final Qualification = 0,1*VP + 0,1*VT + 0,3*P1 + 0,1*E1 + 0,1*E2 + 0,1*E3 + 0,1*DVQ + 0,1*FP
