

Universitat de Lleida

DEGREE CURRICULUM
DIGITAL ELECTRONICS

Coordination: Concepció Roig Mateu

Academic year 2015-16

Subject's general information

Subject name	Digital Electronics
Code	102120
Semester	5
Typology	Compulsory
ECTS credits	6
Theoretical credits	3
Practical credits	3
Coordination	Concepció Roig Mateu
Office and hour of attention	Concepció Roig: Friday from 13:00 h to 14:00 h, Josep M. solà: Friday from 13:00 h to 14:00 h.
Department	Informàtica i Enginyeria Industrial
Modality	Presencial
Important information on data processing	Consult this link for more information.
Language	Català
Degree	Degree in Automation and Industrial Electronic Engineering
Office and hour of attention	Concepció Roig: Friday from 13:00 h to 14:00 h, Josep M. solà: Friday from 13:00 h to 14:00 h.
E-mail addresses	jmsola@diei.udl.cat roig@diei.udl.cat

Josep M. Solà
Concepció Roig Mateu

Learning objectives

Goals

- Learning basic digital devices.
- Establishing operation mechanisms of digital circuits.
- Understanding the applicability of digital circuits in the development of control circuitry and microprocessors.
- Proposing digital circuits able to solve specific problems, meeting constraints related to minimization and availability of devices.
- Analysis of the behaviour of a specific digital circuit and deduction of the implemented logic functions.
- Given a specific situation to be solved with a digital circuit, find out the minimum circuit that responds for this solution.

Competences

Degree-specific competences

- GEEIA21. Knowledge of the basics and applications of digital electronics and microprocessors.
- GEEIA24. Capacity to design analog, digital and power electronic systems.

Degree-transversal competences

- EPS1. Ability to resolve problems and elaborate and defend arguments inside their field of study.
- EPS6. Capacity of analysis and synthesis.

Subject contents

Chapter 1. Binary codes

1.1. Number systems

1.2. Binary arithmetic.

1.3. Representation of signed number.

Chapter 2. Logic functions

2.1. Switching algebra

2.2. Canonical representation of functions.

2.3. Incompletely specified functions.

2.4. Simplification methods,

2.5. Multifunctional simplification.

Chapter 3. Combinational circuits

- 3.1. Pulse and level signals.
- 3.2. Logic gates.
- 3.3. Positive and negative logic.
- 3.4. Two gate level circuits.
- 3.5. Analysis and design of combinational circuits.
- 3.6. Combinational systems.

Multiplexer/ Demultiplexer

Encoder/ Decoder

Comparators

One bit adder/ subtractor

N bits adder

Chapter 4. Sequential circuits

- 4.1. Basic memory cell
- 4.2. Flip-flops
- 4.3. Synchronism
- 4.4. Analysis and design of sequential circuits
- 4.5. Design of synchronous sequential circuits.
- 4.6. Counters
- 4.7. Registers

Chapter 5. Memories and programmable logic devices.

- 5.1. ROM Memory
- 5.2. Combinational PLD
- 5.3. Sequential PLD

Methodology

Classes are divided in different groups, big group (GG), where they attend all the students of the subject and medium group (GM) where there only assist part of the students. The contents of the different kind of groups are divided in the following way:

GG: They are expositive classes where they are shown the main contents on the subject.

GM: they are classes to solve exercises related to the contents exposed in the GG classes, in a participative and interactive way. they also carry out lab practices to solve digital circuits with the simulator ISIS of Proteus.

Evaluation

N_P1: Mark of first partial exam

N_P2: Mark of second partial exam.

N_Pr: Mark of practices.

The final mark of the subject is calculated as following:

$$\text{FINAL_MARK} = 20\% \text{ N_P1} + 50\% \text{ N_P2} + 30\% \text{ N_Pr}$$

To pass the subject it is necessary that FINAL_MARK is greater than or equal to 5.

In the case of not having passed the subject, there is the option to have a recuperation exam. In this case the FINAL_MARK is calculated as following:

N_rec: Mark of the recuperation exam.

$$\text{FINAL_MARK} = 70\% \text{ N_rec} + 30\% \text{ N_Pr}$$
