Subject's extra information

They have to have knowledge of analysis and development of electronic circuits, analogy and digital. For this reason it is recommended to have completed the second year subjects: fundamentals of electronic engineering, industrial automation and fundamentals of electrical engineering.

Compulsory subject in the third year, second semester of Engineering Degree in Industrial Electronics and Automation. This course is intended for students to acquire skills in the analysis and study of industrial instrumentation associated with industrial processes, its regulations and its applications. In fact, in all industrial activity there is a need to measure, control and monitor the operation of the processes, therefore there is a need for specialized personnel in industrial instrumentation.
