DEGREE CURRICULUM

SYSTEMS INTEGRATION III

Coordination: PALLEJÀ CABRÉ, TOMÀS

Academic year 2016-17

Subject's general information

Subject name	SYSTEMS INTEGRATION III			
Code	102132			
Semester	2nd Q(SEMESTER) CONTINUED EVALUATION			
Typology	Degree	Course	Typology	Modality
	Bachelor's Degree in Automation and Industrial Electronic Engineering	4	OPTIONAL	Attendance-based
ECTS credits	6			
Groups	1GG			
Theoretical credits	1			
Practical credits	5			
Coordination	PALLEJÀ CABRÉ, TOMÀS			
Department	INFORMATICA I ENGINYERIA INDUSTRIAL			
Important information on data processing	Consult this link for more information.			
Language	Speaking: As required (Catalan, Spanish or English). Materials and resources: English. Student workload: English.			
Distribution of credits	Theoretical sessions: 1 ECTS Experimental training sessions: 1 ECTS Practical sessions: 4 ECTS			
Office and hour of attention	Robotics Lab (2.04-EPS building). Thursday 10:00-11:00 AM.			

Teaching staff	E-mail addresses	Credits taught by teacher	Office and hour of attention
PALLEJÀ CABRÉ, TOMÀS	tpalleja@diei.udl.cat	7,2	

Subject's extra information

It is mandatory to have completed or be attending the previous subjects (Systems Integration I and II) relating to this optional module.

Learning objectives

Acquire knowledge to design integrated solutions with screen displays and touch panels.

Know how to develop low cost integrated systems based on computer vision with image processing techniques.

Master the Ethernet TCP/IP communications in microcontroller based systems.

Experiment with the design of new systems and new applications of automation and control with industrial level validity and application.

Competences

Strategic Competences of the UdL

UdL2 Command of a foreign language.

UdL3 Mastering ICT's.

Cross-disciplinary competences

EPS4. To have the skills required to undertake new studies or improve the training with self-direction.

EPS9. Capacity for unidisciplinary and multidisciplinary teamwork.

Specific competences

GEEIA21. Knowledge of the basics and applications of the digital electronics and microprocessors.

GEEIA25. Knowledge and capacity for modelling and simulation of systems.

GEEIA27. Knowledge of principles and applications of robotic systems.

Subject contents

1. Advanced development solutions for systems integration
2. Embedded displays and touch systems
3. CMOS image sensors and image processing

4. Real-Time Operation Systems (RTOS)
5. Ethernet TCP/IP communication on microcontrollers

Methodology

The subject is focused on continuous practical work in the embedded systems integration. All these practical work will be developed distributing jobs in work teams where each project will include part of knowledge acquired in previous work in order to accomplish complex integrated systems.

Learning of systems integration will be carried out by STMicroelectronics development tools, mainly with STM32F4-Discovery that includes an ARM Cortex-M high performance 32 bit microcontroller.

The development kits and other materials will be provided entirely by the school.

The practical works will be focused on the application of hardware peripherals managed by microcontrollers where the automation and control will be done using C programming language.

Evaluation

The workload assessed consist in the enforcement of three main consistent practical works based on the development of integrated applications using microcontrollers. Specifically, the issues will be:

P1: Design a graphical interaction device with a TFT display and a touch panel

P2: Implementation of an image processing embedded system

P3: Development of a video surveillance system with intrusion detection

At this way, the course qualification (NC) will be calculated as:

$$NC = P1 \cdot 0.3 + P2 \cdot 0.3 + P3 \cdot 0.4$$

If **NC** is lower than 5.0 there will be an optional exam with a weight of 8 points, the final mark will be computed with:

$$NF = NR + (NC \times 0,2)$$
