DEGREE CURRICULUM **APPLIED NUTRITION**

Coordination: OMS OLIU, GEMMA

Academic year 2022-23

Subject's general information

Subject name	APPLIED NUTRITION			
Code	102233			
Semester	2nd Q(SEMESTER) CONTINUED EVALUATION			
Typology	Degree	Course	Character	Modality
	Bachelor's Degree in Food Science and Technology	3	COMPULSORY	Attendance-based
Course number of credits (ECTS)	6			
Type of activity, credits, and groups	Activity type	PRALAB	PRAULA	TEORIA
	Number of credits	0.8	1	4.2
	Number of groups	4	1	1
Coordination	OMS OLIU, GEMMA			
Department	FOOD TECHNOLOGY, ENGINEERING AND SCIENCE			
Teaching load distribution between lectures and independent student work	Class hours: 60 No class hours: 90			
Important information on data processing	Consult this link for more information.			
Language	Catalan			

Teaching staff	E-mail addresses	Credits taught by teacher	Office and hour of attention
ODRIOZOLA SERRANO, ISABEL ANDREA	isabel.odrizola@udl.cat	2	
OMS OLIU, GEMMA	gemma.oms@udl.cat	6,4	

Subject's extra information

The Nutrition II course is a compulsory subject included in the Bachelor of Science and Technology belonging to Food Nutrition and Health module taught in the second half of the third grade level. The growing information currently available about the relation between diet and health status make increase the interest in food and nutrition. This course aims to promote the study and knowledge of applied nutrition at various physiological and/or pathology states. After the program, students must understand the interaction of nutrients to the body and its relationship to human health, and also acquire the ability to know how to assess the nutritional human status in different physiological situations.

Learning objectives

1. Knowing the nutritional needs of human beings at different stages of life, at physiological and pathological processes associated with nutrition
2. Knowing the different situations of nutritional imbalance, both malnutrition and overnutrition. Learn to identify the possible etiology of nutritional deficiencies and determine knowledge of risk for developing malnutrition.
3. Being able to identify nutrition-related diseases and give specific diets with foods and food adapted products.
4. Acquire practical skills to perform nutritional assessments and know how to use the obtained results

Competences

Specific Competences

CE3. Identify and apply the fundamentals of Biology and Human Physiology necessary for the development of other disciplines and the activities of the profession.

CE6. Posing and solving problems by correctly applying the concepts acquired to specific situations.

CE8. Recognize the basic concepts related to energy expenditure, energy calculations and recommended energy requirements in the different stages of life.

CE11. Define nutritional needs throughout the different stages of life.

CE12. To develop the most recommended nutritional intervention mechanisms-diet modifications for different pathologies.

Basic Competences

CB1. That students have demonstrated to possess and understand knowledge from the base of general secondary education at a level that, while supported by advanced textbooks, also includes some aspects that involve knowledge from the forefront of their field of study.

CB2. That students know how to apply their knowledge to their work or vocation in a professional way and possess the competencies that are usually demonstrated through the elaboration and defense of arguments and the resolution of problems within their area of study.

CB4. That students can transmit information, ideas, problems and solutions to both specialized and non-

specialized audiences.

General Competences

CG1. Analyze specific situations, define problems, make decisions and implement action plans in search of solutions.

CG3. Select and manage the available written and computerized sources of information related to the professional activity.

CG4. Work alone and in a multidisciplinary team.

CG10. Have a critical and innovative spirit.

Transversal Competences

CT1. Correctly present information in oral and written form.

CT2. Communicate and master a foreign language.

CT3. Use existing IT and communication tools as support for the development of their professional activity.

CT5. Apply the gender perspective to the functions of the professional field.

Subject contents

Contents

Tema 1.- Introduction. Concepts of recommended intake, nutritional advice. Balanced diet. Food composition and nutritional tables. Food guides. Dietary Surveys methods and Nutritional Epidemiology.

Tema 2.- Nutricional assessment

Tema 3.-Nutrition at different stages of life: infancy, school children and adolescents

Tema 4.- Nutrition in pregnancy, lactation and menopause

Tema 5.- Aging and Elderly Nutrition

Tema 6.- Sports Nutrition

Tema 7.- Plant-based diets

Tema 8.- Food allergies and intolerances

Tema 9.- Nutrition and alcohol

Tema 10.- Nutrition in pathological situations

Practical activities

Practical activities of this course will be related to assess and evaluate the nutritional status of a person:

1. Physical and anthropometric assessment, and body composition

2. Determination of biochemical parameters

3. Calculation of nutritional needs and energy

4. Assessment of dietary intake and nutritional habits and lifestyle

It is MANDATORY that students carry in the course of teaching practices:

- UdL white labcoat

It can be purchased at the ÚDELS Store of the UdL

Centre de Cultures i Cooperació Transfronterera – Campus Capponet

Carrer de Jaume II, 67 baixos

Methodology

Activity	Description	Class activity	No class activity		Evaluation		Time	
		Objectives	Hours	Student work	Hours	Hours	Hours	ECTS
Lecture	Lectures (large group)	Explanation of the main concepts	42	Study: Know, understand and knowledge synthesis	50	4	96	3,84
Practices	Class participation (little class group)	Understanding phenomena, mesuring,..	8	Solving cases. Discussing	12		20	0,64
Seminars	Laboratory practice (large class group)	Carrying out activities for discussion and application	4	Studying and making reports	8		12	0,64
Computer lab	Practices in computer room (large class group)	Understanding phenomena, mesuring,..	2	Studying and making reports	4		6	0,24
Directed activities	Student's written work (individually or in groups)	Helping the student to make the work (in tutorials hours)	4	Making a bibliographical work, practical, and so on.	12		16	0,64
Totals			60		86	4	150	6

Evaluation

Activity	Evaluation activity		Evaluation weight
	Procedure	Number	
Lecture	Exams	2	30+30
Practices	Report	1	10
Seminars	Activities in class	1	15
Written work	Written work	1	15
Total			100

2 partial exams will be undertaken of the theoretical part, with multiple choice test questions with four options. This type of evaluation corresponds to 60% of the final grade.

The student must pass the theory part with a note of 5 out of 10, obtained as an average grade of the two partial exams. If the student doesn't pass the exams (<5), the person has to retake the failed exams in a second call.

The evaluation of the theoretical part corresponds to 60% of the final grade and and will have to be overcome to do the average with the rest of activities, seminars, practices and work.
