

Universitat de Lleida

DEGREE CURRICULUM
**CALCULUS AND MACHINE
DESIGN**

Coordination: ROCA ENRICH, JOAN

Academic year 2017-18

Subject's general information

Subject name	CALCULUS AND MACHINE DESIGN			
Code	102304			
Semester	2nd Q(SEMESTER) CONTINUED EVALUATION			
Typology	Degree	Course	Typology	Modality
	Bachelor's Degree in Mechanical Engineering	3	COMPULSORY	Attendance-based
ECTS credits	6			
Groups	1GG,2GM,5GP			
Theoretical credits	3			
Practical credits	3			
Coordination	ROCA ENRICH, JOAN			
Department	INFORMATICA I ENGINYERIA INDUSTRIAL			
Teaching load distribution between lectures and independent student work	Attendance work: 40 % Autonomous work: 60 %			
Important information on data processing	Consult this link for more information.			
Language	Catalan. Also some material in spanish or in english			
Office and hour of attention	Joan Roca Enrich. Tuesday, 12:00 to 13:00; Wednesday 17:00 to 18:00			

Teaching staff	E-mail addresses	Credits taught by teacher	Office and hour of attention
ROCA ENRICH, JOAN	jroca@diei.udl.cat	10,2	Office 0.07 in building CREA Tuesday, from 12:00 to 13:00 Wednesday, from 17:00 to 18:00

Subject's extra information

The main background needed to take advantage of the subject are: graphic expression, materials science, kinematics and dynamics of mechanisms.

It is essential to have studied previously, and it is advisable to have passed the following subjects:

- Graphics Expression I
- Theory of Mechanisms
- Theory of Machines
- Materials for mechanical manufacturing

It is also advisable to be taking at the same time the subjects:

- Manufacturing technologies
- Graphic Expression II

Regarding the safety rules that apply to the laboratory practices:

It is **COMPULSORY** that the students bring the following elements of individual protection (EPI) to the practices at the laboratory.

- Blue laboratory gown from UdL (unisex)
- Protection glasses
- Mechanical protection gloves

They can be purchased through the shop Údels of the UdL:

C/ Jaume II, 67 baixos
Centre the Cultures i Cooperació Transfronterera

<http://www.publicacions.udl.cat/>

The use of other elements of protection (for example caps, masks, gloves of chemical or electrical risk, etc.) will depend on the type of practice to be done. In that case, the teacher will inform of the necessity of specific EPI.

Not bringing the EPI's described or not fulfilling the norms of general security that are detailed below imply that the student can not access to the laboratories or have to go out of them. The no realisation of the practices for this reason imply the **consequences in the evaluation** of the subject that are described in this course guide.

GENERAL NORMS OF SECURITY IN LABORATORY PRACTICES

- Keep the place of realisation of the practices clean and tidy. The table of work has to be free from backpacks, folders, coats...

- No short trousers or short skirts are allowed in the laboratory.
- Closed and covered footwear is compulsory in the laboratory.
- Long hair needs to be tied.
- Keep the laboratory gown laced in order to be protected from spills of chemicals.
- Bangles, pendants or wide sleeves are not allowed as they can be trapped.
- Avoid the use of contact lenses, since the effect of the chemical products is much bigger if they enter between the contact lense and the cornea. Protection over-glasses can be purchased.
- No food or drink is allowed in the laboratory.
- It is forbidden to smoke in the laboratories.
- Wash your hands whenever you have contact with a chemical product and before going out of the laboratory.
- Follow the instructions of the teacher and of the laboratory technicians and ask for any doubt on security.

For further information, you can check the following document of the *Servei de Prevenció de Riscos Laborals de la UdL*: <http://www.sprl.udl.cat/alumnes/index.html>

Learning objectives

- Know and understand the different steps in the design process of a machine
- To introduce the basic principles of fatigue in machine design
- Acquire the basic knowledge for the calculation, selection or dimensioning of threaded elements
- Acquire the basic knowledge for the calculation, selection or dimensioning of flexible transmission systems
- Acquire the basic knowledge for the calculation, selection or dimensioning of gear transmissions
- Acquire the basic knowledge for the calculation, selection or dimensioning of rolling and sliding bearings
- Acquire the basic knowledge for the calculation, design and dimensioning of transmission shafts
- Acquire the basic knowledge for the analysis and design of clutches and brakes

Competences

Cross-disciplinary competences

- **EPS1.** Capacity to solve problems and prepare and defence arguments inside the area of studies.
- **EPS6.** Capacity of analysis and synthesis.

Specific competences

- **GEM20.** Knowledge and capacity for the calculation, design and testing of machines.

Subject contents

1. SPECIFICATIONS AND REQUIREMENTS OF A MACHINE
2. BOLTS AND THREADED ELEMENTS
3. STRUCTURAL FATIGUE OF MACHINE ELEMENTS
4. FLEXIBLE TRANSMISSION SYSTEMS
5. CALCULATION OF GEAR TRANSMISSIONS
6. BEARINGS AND GUIDANCE SYSTEMS
7. CALCULATION OF TRANSMISSION SHAFTS
8. CLUTCHES AND BRAKES

Methodology

Lectures: They will take place during the Full Group sessions. Explanation of theoretical content and proposal and/or resolution of some practical examples.

Problems: They will take place during the Half Group sessions. Approach and discussion of some problems that the students will solve individually or in groups.

Practices: They will take place during the Half Group sessions. 2 Practices at the Mechanics laboratory, analysing and measuring design parameters of mechanical systems, 1 practice about design of machinery using CAD.

Work in group: Development of 2 works about the design and calculations of a subassembly of a machine.

Development plan

Week	Methodology	Unit	Attendance hours	Autonomous work hours
1	Lectures	Unit 1: Theory	2	0
2	Lectures Problems	Unit 2: Theory Unit 2: Problems	2 2	4
3	Lectures Problems	Unit 2-3: Theory Work in group 1	2 2	4
4	Lectures Problems	Unit 3: Theory Practice 1	2 2	4
5	Lectures Practice	Unit 4: Theory Work in group 1	2 1	6
6	Lectures Problems	Unit 4: Theory Practice 2	2 2	4
7	Lectures Problems	Unit 5: Theory Unit 4: Problems	2 2	4
8	Lectures Practice	Unit 5: Theory Work in group 1	2 1	6
9	Evaluation	Exam 1	2	5
10	Lectures Problems	Unit 5: Theory Unit 5: Problems	2 2	6
11	Lectures Practice	Unit 6: Theory Work in group 2	2 2	8
12	Lectures Problems	Unit 6: Theory Unit 6: Problems	2 2	6
13	Lectures Problems	Unit 7: Theory Work in group 2	2 2	6
14	Lectures Problems	Unit 7: Theory Unit 7: Problems	2 2	6
15	Lectures Problems	Unit 8: Theory Unit 8: Problems	2 2	6

16-17	Evaluation	Exam 2	2	7
18	Tutoring	Tutoring	2	4
19	Evaluation	Recovery exam	2	4

Evaluation

There will be several evaluation activities:

- 1st individual written exam (week 9). Multiple choice exam, the content to be evaluated is the one exposed and worked in class up to the date of this exam.
- 2n individual written exam (week 9). The content to be evaluated is the problems, the works in group and the practice sessions realised up to the date of this exam.
- 3rd individual written exam (week 16 or 17). Multiple choice exam, the content to be evaluated is the one exposed and worked in class from the 1st and 2n exams date on.
- 4th individual written exam (week 16 or 17). The content to be evaluated is the problems, the works in group and the practice sessions realised from the 1st and 2n exams date on.
- In order to pass the subject, a minimum mark of 3 out of 10 must be reached as the weighed mark of the 4 individual exams. If this minimum mark of 3 is not reached, the subject mark will be the minimum between the 4 exams weighed mark and 3.
- Practice sessions in the laboratory that are mandatory. Reports from the practice sessions will be evaluate as Right or Wrong.
- 2 works in group about the design and calculations of a subassembly of a machine
- Recovery exam of the individual ones (week 20). A minimum mark of 4 out of 10 must be reached as the weighed mark of the 4 individual exams in order to attend the recovery exam.

The weight assigned to each evaluation activity, out of 100, is as follows:

Activity	Weight
1st individual exam	20
2n individual exam	20
3rd individual exam	20
4th individual exam	20
Work in group	20
Recovery exam of the individual ones	80

Note: in case a student doesn't attend to any of the practice sessions, the mark of the subject will be "Not Presented"
