

Universitat de Lleida

DEGREE CURRICULUM **MANUFACTURING TECHNOLOGIES**

Academic year 2015-16

Subject's general information

Subject name	Manufacturing Technologies
Code	102309
Semester	2nd
Typology	Mandatory
ECTS credits	6
Groups	1 GG, 2 GM and 5 GP
Theoretical credits	3
Practical credits	3
Office and hour of attention	Miquel Nogués, Tuesday from 19:00 to 20:30 and Thursday from 10 to 11:30 Juan José González, Thursday from 18:00 to 20:00
Department	Informàtica i Enginyeria Industrial
Teaching load distribution between lectures and independent student work	40% lectures in class 60% independent student work
Modality	Presencial
Important information on data processing	Consult this link for more information.
Language	Catalan
Degree	Degree in Engineering Mechanics
Distribution of credits	Miquel Nogués Aymamí 3 Juan Jose Gonzalez Fabra 7,2
Office and hour of attention	Miquel Nogués, Tuesday from 19:00 to 20:30 and Thursday from 10 to 11:30 Juan José González, Thursday from 18:00 to 20:00
E-mail addresses	mnogues@diei.udl.cat jgonza@diei.udl.cat

Miquel Nogués Aymamí
Juan Jose Gonzalez Fabra

Subject's extra information

It is essential to have studied previously, and it is advisable to have passed the following subjects:

- GRAPHICS EXPRESSION I.
- MATERIALS SCIENCE.
- THEORY OF MECHANISMS.
- ELASTICITY AND STRENGTH OF MATERIALS I.
- MATERIALS FOR MECHANICAL MANUFACTURING.

Learning objectives

To show different systems and manufacturing processes of parts, especially metal parts, due to its great importance in the industrial world.

Competences

Degree-specific competences

- Applied knowledge of manufacturing, metrology and quality control systems and processes.
- Knowledge and ability to apply mechanical engineering.

Degree-transversal competences

- Ability to resolve problems and elaborate and defend arguments inside their field of study.
- Ability to analyse and synthesize

Subject contents

Topic 1 - METROLOGY

Topic 2 - METAL FORMING PROCESSES.

Topic 3 - METAL CUTTING AND MACHINING PROCESSES.

Topic 4 - NUMERICAL CONTROL.

Topic 5 - WELDING TECHNOLOGIES

Topic 6 - RAPID PROTOTYPING

Topic 7 - UNCONVENTIONAL MACHINING PROCESSES.

Methodology

Theory class: Presentations are available in SAKAI before class starts.

Problems class: Solving problems, questions and exercises. Solved exercises are available in SAKAI

Lab Practices: Assistance and adequate attendance in all the lab exercises is mandatory to pass the course

Development plan

Week 1 and 2 - METROLOGY

Week 3 and 4 - METAL FORMING PROCESSES

Week 5, 6, 7 and 8 - METAL CUTTING AND MACHINING PROCESSES.

Week 9, 10 and 11 - NUMERICAL CONTROL

Week 12 and 13 - WELDING TECHNOLOGIES

Week 14 - RAPID PROTOTYPING

Week 15 - UNCONVENTIONAL MACHINING PROCESSES.

WORKSHOP EXERCISES

- METROLOGY (calipers, micrometres, dial indicators, protactors, ...)
- SHEETMETAL FORMING (punching and bending machines)
- LATHE AND MILLING MACHINES
- NUMERICAL CONTROL (CIMCO software)
- CAD/CAM (MASTERCAM software)
- WELDING TECHNOLOGIES (shielded arc, TIG, MIG/MAG, soldering, brazing and resistance spot welding)

Evaluation

The evaluation will consist of one theoretical part and one practical part.

The theoretical part will be divided in two exams which are indicated in the academic calendar, and each exam will have two parts: a multiple test and exercises. The theory grade (NT) obtained will be calculated by:

$$NT = + 0,5 \times E1 + 0,5 \times E2$$

In the practical part (NP) must be remarked that assistance and adequate attendance in all the lab exercises is mandatory to pass the course

The mark of the practical part will be obtained by:

$$NP = + 0,4 \times PR + 0,6 \times TR$$

where:

PR: Reports delivered in lab and practical problems in class

TR: Exercises done in a teamwork

Final course grade (NF)

$$NF = + 0,7 \times NT + 0,3 \times NP$$

If the final score is not greater than or equal to 5, students can do the extraordinary exam which will contain all the extraordinary syllabus of the course to rise his mark. The practice mark is not recoverable.
