Subject's extra information

The main knowledge necessary for the proper following of the subject are those which are treated on the subject Graphic Expression I.

Learning objectives

- Express and interpret the geometry of a part from sketches and freehand annotations.
- Express and interpret the assembly/operation of a group/mechanism from sketches and freehand annotations.
- Understand how to use parametric modeling/design techniques of parts and assemblies.
- Know the main features that CAD softwares have in common when modeling parts and assemblies.
- Have the ability to create appropriate drawings in order to report any design created with 3D CAD.
- Apply the previous knowledge using a parametric CAD software available in the market: the CREO.

Competences

Strategic Competences of the UdL

- **UdL3** Mastering ICT's.

Specific competences

- **GEM5**. Capacity of spatial vision and knowledge of the techniques of graphic representation, either by traditional methods of metric geometry and descriptive geometry or by applications of computer-aided design.
- **GEM19**. Knowledge and capacity to apply graphic engineering techniques.

Subject contents

1. INTRODUCTION TO CAD SYSTEMS
    1.1 Definition and classification of CAD systems
    1.2 Design process using 3D CAD modelling tools
    1.3 Modelling process with a parametric system
    1.4 CAD files in native and neutral formats
    1.5 Additional modules of a CAD system and integrated softwares
2. 3D PARAMETRIC MODELING OF PARTS
    2.1 Sequence of parts parametric modelling process
    2.2 Editing geometry, features and models
    2.3 Datum Features
    2.4 Parametric sketch of 2D geometry
    2.5 Feature types for the geometry part definition
    2.6 Editing features: group, copy, symmetry
    2.7 Patterns
    2.8 Checking, measuring and analysing of parts
    2.9 Parent-child relationships
    2.10 Parameters and Relations
    2.11 Parts families
3. ASSEMBLIES CREATION IN PARAMETRIC CAD
    3.1 Groups assembly
    3.2 Sections
    3.3 Explodes
    3.4 Parameters and Relations

3.5 Assemblies families

4. DRAWINGS GENERATION

4.1 Introduction

4.2 Creation process of a new CAD parametric drawing

4.3 Addition of views to the drawing

4.4 Views properties

4.5 Exploded views

4.6 Views annotations

4.7 Other annotations in drawings

Methodology

- **Lectures**: They will take place during the Full Group sessions. Statement of theoretical contents followed by practical examples.
- **Practices**: They will take place during the Half Group sessions. CREO software usage in order to apply theoretical concepts doing practical exercises.
- **Group work**: Team development of a parametric CAD modelling project.

Development plan

Week	Methodology	Unit	Attendance hours	Autonomous work hours
1	Lectures Practices	Subject introduction CREO interface introduction	1 2	0
2	Lectures Practices	Unit 1: Theory Unit 1: Practices	2 2	2
3	Lectures Practices	Unit 2: Theory Unit 2: Practices	2 2	4
4	Lectures Practices	Unit 2: Theory Unit 2: Practices	2 2	6
5	Lectures Practices	Unit 2: Theory Unit 2: Practices	2 2	6
6	Lectures Practices	Unit 2: Theory Unit 2: Practices	2 2	6
7	Lectures Practices	Unit 3: Theory Unit 3: Practices	2 2	6
8	Group work	Group work development	1,5	6
9	Evaluation	Test 1 - Theory Test 1 - Practice	3	6
10	Lectures Practices	Unit 3: Theory Unit 3: Practices	2 2	6

11	Lectures Practices	Unit 3: Theory Unit 3: Practices	2 2	6
12	Lectures Practices	Unit 4: Theory Unit 4: Practices	2 2	6
13	Lectures Practices	Unit 4: Theory Unit 4: Practices	2 2	6
14	Lectures Practices	Unit 4: Theory Unit 4: Practices	2 2	6
15	Group work	Group work development	1,5	6
16-17	Evaluation	Test 2 - Theory Test 2 - Practice	3	6
18	Tutoring	Tutoring	1	3
19	Evaluation	Recovery Test	3	3

Evaluation

Several evaluation activities will be done:

- Test 1 - Practice: Individual practical exercise, medium term (week 9). It will be evaluated the content exposed and worked in class up to the date of this exercise.
- Test 1 - Theory: Individual test, medium term (week 9). It will be evaluated the content exposed and worked in class up to the date of this exercise.
- Test 2 - Practice: Individual practical exercise, at the end of the semester (week 16 or 17). It will mainly be evaluated the content exposed and worked in class between the Test 1 - Practice and Test 2 - Practice .
- Test 2 - Theory: Individual test, at the end of the semester (week 16 or 17). It will mainly be evaluated the content exposed and worked in class between the Test 1 - Theory and Test 2 - Theory.
- Group work: Parts and mechanical assemblies design project to be held in groups along the semester.
- Recovery Test: Single individual test. It will be evaluated the same content of the 4 individual tests done along the course. It will be constituted by a practical part and a theoretical part. If the student takes part on this evaluation activity, the obtained mark substitutes the one obtained from the weighted mark of the 4 previous activities, whether it is higher or lower.

The weight assigned to each evaluation activity, out of 100, is as follows:

Activity	**Weight**
Test 1 - Practice	15
Test 1 - Theory	15
Test 2 - Practice	25
Test 2 - Theory	25
Group work	20
Recovery Test	80

Note:

In order to be able to take part of the Recovery Test, a minimum mark of 3 is required in the weighted mark of the 4 individual tests.
If a minimum mark of 3 is not obtained in the weighted mark of the 4 individual tests or in the mark of the Recovery Test, the final mark of the subject will be the minimum between the result of the average percentage, according to the previous table, and 3.
The mark of the Group work is not recoverable.
