

Universitat de Lleida

DEGREE CURRICULUM
**INTEGRATED PRACTICE:
ENGINEERING AND
MANAGEMENT**

Coordination: COTS RUBIO, LLUIS

Academic year 2023-24

Subject's general information

Subject name	INTEGRATED PRACTICE: ENGINEERING AND MANAGEMENT			
Code	102545			
Semester	1st Q(SEMESTER) CONTINUED EVALUATION			
Typology	Degree	Course	Character	Modality
	Bachelor's Degree in Agricultural and Food Engineering	4	COMPULSORY	Attendance-based
Course number of credits (ECTS)	6			
Type of activity, credits, and groups	Activity type	PRACAMP	PRAULA	TEORIA
	Number of credits	0.7	4.1	1.2
	Number of groups	1	1	1
Coordination	COTS RUBIO, LLUIS			
Department	AGRICULTURAL AND FOREST SCIENCES AND ENGINEERING			
Teaching load distribution between lectures and independent student work	Lectures: 60 h Independent student work: 90 h			
Important information on data processing	Consult this link for more information.			
Language	Catalan: 90% Spanish: 10%			
Distribution of credits	Carlos Cantero Martínez 0,3 Luis F. Gosalvez Lara 0,3 Lluís Martín Closas 0,3 Josep Maria Villar Mir 1,2 José Millán Gómez 0,3 Àlvaro Fernández Serrano 1,5 Joan Ramon Rosell Polo 0,5 Lluís Cots Rubió 1,6			

Teaching staff	E-mail addresses	Credits taught by teacher	Office and hour of attention
CANTERO MARTINEZ, CARLOS	carlos.cantero@udl.cat	,3	
COTS RUBIO, LLUIS	lluis.cots@udl.cat	1,6	
ESTRUCH BOSCH, ESTHER	esther.estruch@udl.cat	,3	
FERNANDEZ SERRANO, ALVARO	alvaro.fernandezserrano@udl.cat	1,5	
MARTIN CLOSAS, LLUIS	lluis.martin@udl.cat	,3	
ROSELL POLO, JOAN RAMON	joanramon.rosell@udl.cat	,5	
VILLALBA MATA, DANIEL	daniel.villalba@udl.cat	,3	
VILLAR MIR, JOSEP MARIA	josepmaria.villar@udl.cat	1,2	

Subject's extra information

Subject in the whole curriculum

It aims to apply all the knowledge gained in the field of all subjects in a real case study.

Recommendations

It is advisable to have a sense of synthesis of all the subjects studied during the degree and especially of the engineering subjects to be able to apply them correctly in the practical case that arises.

Covid-19

Due to causes arising from the health crisis caused by Covid-19, face-to-face activities can be replaced by other equivalents in distance mode.

Learning objectives

Objectives and learning outcomes

The aim is for students to be trained in solving a case study focused on the field of specific technology in rural and environmental engineering. Students will have to make a study of the conditions and from there establish the production plan and the necessary engineering.

The aspects to study in the work will be:

1. Characterization of the conditions of the physical environment, irrigation, the developer, socio-economic, environmental and legal, etc.
2. Study and choice of alternatives to the production plan
3. Necessary engineering
4. Financial and economic evaluation of the investment
5. Presentation of the conclusions following the professional formats of projects (report and annexes, plans, budget and specifications)

Competences

General skills

CB1. That students have demonstrated to possess and understand knowledge in an area of study that starts from the base of general secondary education, and is usually found at a level that, although supported by advanced textbooks, also includes some aspects that imply knowledge from the forefront of your field of study.

CB2. That students know how to apply their knowledge to their work or vocation in a professional way and possess the competencies that are usually demonstrated through the elaboration and defense of arguments and the resolution of problems within their area of study.

CB3. That students have the ability to gather and interpret relevant data (usually within their area of study) to make judgments that include reflection on relevant issues of a social, scientific or ethical nature.

CB4. That students can transmit information, ideas, problems and solutions to both specialized and non-specialized audiences.

CB5. That students have developed those learning skills necessary to undertake further studies with a high degree of autonomy.

CG1. Capacity for the prior preparation, conception, drafting and signing of projects that have as their object the construction, reform, repair, conservation, demolition, manufacture, installation, assembly or exploitation of movable or immovable property that due to its nature and characteristics are included in the own technique of agricultural and livestock production (facilities or buildings, farms, infrastructures and rural roads), the agrifood industry (extractive, fermentation, dairy, canning, fruit and vegetable, meat, fishing, salting industries and, in general, any other dedicated to the elaboration and / or transformation, conservation, handling and distribution of food products) and gardening and landscaping (urban and / or rural green spaces, parks, gardens, nurseries, urban trees, etc., public or private sports facilities and environments subjected to landscape restoration).

CG2. Adequate knowledge of physical problems, technologies, machinery and water and energy supply systems, the limits imposed by budgetary factors and construction regulations, and the relationships between facilities or buildings and agricultural holdings, agrifood industries and spaces related to the gardening and landscaping with their social and environmental surroundings, as well as the need to relate those and that environment with human needs and the preservation of the environment.

CG3. Ability to direct the execution of the works object of the projects related to agrifood industries, agricultural operations and green spaces and their buildings, infrastructures and facilities, the prevention of risks associated with this execution and the management of multidisciplinary teams and human resource management, in accordance with deontological criteria.

CG4. Ability to write and sign measurements, segregations, subdivisions, evaluations and appraisals within the rural environment, the technique of the agrifood industry and spaces related to gardening and landscaping, whether or not they have the character of expert reports for judicial bodies or administrative, and regardless of the use to which the movable or immovable property object of the same is allocated.

CG5. Ability to write and sign rural development studies, environmental impact and waste management of the agrifood industries, agricultural and livestock operations, and spaces related to gardening and landscaping.

CG6. Ability to direct and manage all kinds of agri-food industries, agricultural and livestock farms, urban and / or rural green spaces, and public or private sports areas, with knowledge of new technologies, quality processes, traceability and certification and the marketing techniques and commercialization of food products and cultivated plants.

CG7. Knowledge of basic, scientific and technological subjects that allow continuous learning, as well as an ability to adapt to new situations or changing environments.

CG8. Ability to solve problems with creativity, initiative, methodology and critical reasoning.

CG9. Leadership, communication and transmission of knowledge, abilities and skills in the social fields of action.

CG10. Ability to search and use the rules and regulations related to its scope of action.

CG11. Ability to develop their activities, assuming a social, ethical and environmental commitment in tune with the reality of the human and natural environment

CG12. Ability to work in multidisciplinary and multicultural teams.

CT1. Correction in oral and written expression.

CT3. Mastery of Information and Communication Technologies.

CT4. Respect for the fundamental rights of equality between men and women, the promotion of Human Rights and the values of a culture of peace and democratic values.

Specific skills.

CEMCR1. Technologies of plant and animal production. Ability to know, understand and use the principles of: Plant breeding; Biotechnology and plant breeding; Crops; Crop protection; Gardening and Landscaping. Sport zones. Nutrition. Hygiene and animal production systems. Biotechnology and Animal Improvement. Animal products.

CEMCR2. Ability to know, understand and use the principles of: Bases and technology of rural buildings. Soil mechanics. Materials. Material resistance. Structure Design and calculation. Agricultural constructions. Infrastructures and rural roads.

CEMCR3. Ability to know, understand and use the principles of: Agricultural mechanization. Agricultural engines and machines. Characteristics and design of machinery for agricultural facilities. Agricultural automatic.

CEMCR4. Ability to know, understand and use the principles of: Facilities engineering. Rural electrification. Irrigation and drainage technology. Hydraulic works and installations. Facilities for animal health and welfare.

Subject contents

Temary

Block A. Characterization of the conditions of the physical, environmental, legal, developer, irrigation and socio-economic environment, etc. (Professor Josep Maria Villar and others)

A.1.- Climatic characteristics.

1. General features and climatology of the area (Summary that must include monthly averages of rainfall, temperature, radiation and wind). Indicators of interest (Limitations, if any, for the implementation of certain

crops (both herbaceous and arboreal).

2. Identification of the main conditions and limitations for agricultural production (frost, wind, distribution and intensity of rain, squid, periods of drought, ETo)
3. Meteorological stations for the monitoring of the meteorological conditions in real time (Applications of interest according to the type of work to realize, geographic area, agricultural exploitation, etc)

A.2.- Soil characterization:

1. Soil information available (characterization and interpretation work). How to take soil samples according to the purpose of the study.
2. Identification of the main conditions or limitations for agricultural production (salinity, soil depth, CRAD, texture and structure, pH, sodicity, organic matter, carbonates, stoniness, risk of erosion, drainage needs,)
3. Soil fertility (diagnosis of soil fertility, identification of properties that may affect agricultural production and the fertilization plan according to the production plan). Collection of complementary information (analysis of plants, commonly used fertilizers, dosage, time of application and form of application,)

A.3.- Implications in production systems:

1. Interaction of the conditions of the environment in the technology of the production (work of the floor, management of the vegetal cover, defense against frosts, ...)
2. Resource management (water and nutrients). Irrigation programming (in irrigation systems). Estimation and probability of annual yields as a function of rainfall (for rainfed crops). Fertilization plans
3. Evaluation of resource efficiency

A.4.- Environmental aspects (Livestock manure plans, regulations for areas vulnerable to fertilization calculations, animal welfare regulations, chemicals and phytosanitary products to be used and compliance with application regulations, regulations, etc....)

1. Regulations and implementing provisions
2. Aspects to be taken into account and degree of compliance
3. Land-landscape relations (if applicable)
4. How to monitor the impact of agricultural activity on the environment.

Bloc B.- Estudi i elecció d'alternatives del pla productiu (Professors: Carlos Cantero, Luis F. Gosálvez i Lluís Martín)

B.1.- Elecció del pla productiu de conreus

1. Alternativa de cultius: Elecció del/s cultius
2. Elecció de rotació (si es el cas)
3. Descripció de la tecnologia de cultius aplicada al cultiu escollit: Descripció senzilla i segons model de fitxa que es lliurarà i explicarà i que inclourà (1) característiques del maneig del sòl (conreu); (2) característiques de la sembra i elecció del material vegetal; (3) programació de la fertilització; (4) càlcul de les necessitats hídriques del cultiu; (5) pla de control de males herbes, plagues i malalties; (6) Mètode i forma de recol·lecció i emmagatzemant del producte del cultiu.

B.2.- Elecció del pla productiu ramader

1. Descripció de les alternatives
2. Elecció de l'alternativa
3. Descripció dels principals punts a seguir per al desenvolupament de l'alternativa triada: Material animal, cicle productiu, maneig, alimentació, sanitat i higiene, producte final.

B.3.- Elecció del sistema de reg

Block B.- Study and choice of alternatives of the productive plan (Teachers: Carlos Cantero, Luis F. Gosálvez and Lluís Martín)

B.1.- Choice of the productive plan of crops

1. Alternative crops: Choice of crop (s)
2. Choice of rotation (if applicable)
3. Description of the crop technology applied to the chosen crop: Simple description and according to model of file that will deliver and explain and that will include (1) characteristics of the handle of the floor (crop); (2) characteristics of planting and choice of plant material; (3) fertilization scheduling; (4) calculation of crop water needs; (5) weed, pest and disease control plan; (6) Method and form of harvesting and storage of the crop product.

B.2.- Choice of the livestock production plan

1. Description of the alternatives
2. Choice of alternative
3. Description of the main points to follow for the development of the chosen alternative: Animal material, production cycle, handling, food, health and hygiene, final product.

B.3.- Choice of irrigation system

Block C.- Engineering

C.1.- Irrigation Engineering (Teacher: Lluís Cots)

1. Agronomic design and hydraulic design of the installation and the irrigation head
2. Choice of materials and equipment of the installation
3. Management of the installation
4. Plans of the irrigation installation and the irrigation head

C.2.- Construction Engineering (Teachers: Álvaro Fernández and Lluís Puigdomènech)

1. Basic dimensions of ship according to needs
2. Dimensioning of foundations
3. Structural needs
4. Closure materials and insulation and waterproofing needs
5. Auxiliary works

C.3.- Electrification Engineering (Professor Joan R. Rosell)

1. Dimension the low voltage installation.

2. Carry out the electrical calculation of the transformer to supply the low voltage installation.
3. Carry out the electrical calculation of the high voltage line that supplies the transformer.

C.4.- Other aspects of engineering to be considered according to the proposed project can be: roads and internal drainage network of land, systematization of land, choice of agricultural and livestock machinery, design of heating systems, ventilation, refrigeration and fire protection, automation of facilities, temporary planning of works, etc.

Block D.- Financial and economic evaluation of the investment (Teacher: José Millan)

1. Financial or private evaluation of the project
 - 1.1. Parameters characteristic of an investment.
 - 1.2. Profitability criteria (NPV, IRR and Payback).
 - 1.3. Sensitivity analysis.
2. Economic or social evaluation of the project: external benefits and costs.

Practical activities

Guided activities (ACD)

Once the case to be solved has been chosen and specified with the objectives of the work and prior acceptance of the same by the coordinating teacher of the subject, the teachers of the different areas involved in the case to be solved will attend to the students to guide them. and resolve any doubts that may arise in agreed tutoring schedules in order to achieve the objectives set at work

Visits (VIS)

Visit to companies and facilities similar to those that are the object of study according to the theme chosen by the students.

Methodology

Learning activities

Explanation and presentation of the subject in person by the coordinator and also by the other teachers on how to work on the different aspects of the project or case to be studied. The follow-up of the work will be done with directed activities or seminars of face-to-face or virtual tutorials depending on the needs that arise.

Type of activity	Description	Face-to-face activity Student		Non-contact activity Student		Total time	
		Goals	Hours	Student work	Hours	Hours	ECTS
Master class	Master class (Classroom. Small group)	Explanation of cases, methodology and sources of information	12	Study: Know, understand and synthesize knowledge	12	24	0,96

Directed activity	Student work	Orient the student in the work (in schedule of tutorials)	41	Student work	60	101	4,04
Visits	Visits	Contact with reality	6	Contrast reality with what you have learned	6	12	0,48
Evaluation	Presentation of the final document	Discuss and present the document in public	1	Synthesis of the work and preparation of the presentation	12	13	0,52
Totals			60		90	150	6,0

Observations

25 hours of total activity per ECTS credit have been considered.

Development plan

Timing

It will depend on the case chosen, but in a generic way you could have the following planning

Type of activity	Content	Contact hours
Theory	Subject presentation	2
Theory	Block A	2
Directed Activity	Block A	10
Theory	Block B1 and B2	1
Directed Activity	Block B1 and B2	4
Theory	Block B3 and B4	1
Directed Activity	Block B3 and B4	2
Theory	Bloc C1	2
Directed Activity	Bloc C1	6
Visit	1st Visit	2
Directed Activity	Block A and B	2
Theory	Block C2	1
Directed Activity	Block C2	6
Visit	2nd Visit	2
Theory	Block C3	1
Directed Activity	Block C3	3
Theory	Block C4	1
Directed Activity	Block C4	3

Directed Activity	Block B and C	3
Visit	3rd Visit	2
Theory	Block D	1
Directed Activity	Block D	2
Evaluation	Evaluation	1
Totals		60

Evaluation

Evaluation

Completion terms

Deadlines will be set for each part of the project so that it is done gradually throughout the semester. Failure to meet the deadlines will result in a negative assessment in the final grade.

Activities

Type of activity	Evaluation Activity	weight rating	
	Procedure	Number	(%)
All	Continuous performance and follow-up of the work (P1)	7	20
All	Written presentation of the work (P2)	1	50
All	Oral presentation (P3)	1	30
TOTAL			100

In the oral presentation, the student will present the work in the set time and at the end there will be a round of questions from the teachers on different aspects of the project in order to assess the knowledge acquired by the student.

As requirements to pass the subject, it is established that the presentation of the written work document (P2) and the oral presentation (P3) are mandatory, and that the grade for both parts must be greater than or equal to 4.

$$\text{The Final Grade} = 0.2 \cdot P1 + 0.5 \cdot P2 + 0.3 \cdot P3$$

The subject is approved if the Final Grade ≥ 5 and $P2 \geq 4$ and $P3 \geq 4$

Alternative assessment

The alternative assessment will consist of a written work and oral exam that will account for 100% of the grade, which will have to be handed in by the deadlines set on the virtual campus for the rest of the students.
