DEGREE CURRICULUM
BUILDINGS AND EARTHWORKS

Coordination: PUIGDOMENECH FRANQUESA, LUIS

Academic year 2020-21

Subject's general information

| | | | | | |
|---|---|---------|------------|------------------|--------|
| Subject name | BUILDINGS AND EARTHWORKS | | | | |
| Code | 102579 | | | | |
| Semester | 1st Q(SEMESTER) CONTINUED EVALUATION | | | | |
| Typology | Degree | Course | Character | Modality | |
| | Bachelor's Degree in Agricultural and Food Engineering | 4 | COMPULSORY | Attendance-based | |
| Course number of credits (ECTS) | 6 | | | | |
| Type of activity, credits, and groups | Activity type | PRACAMP | PRALAB | PRAULA | TEORIA |
| | Number of credits | 0.2 | 1.2 | 1.5 | 3.1 |
| | Number of groups | 1 | 1 | 1 | 1 |
| Coordination | PUIGDOMENECH FRANQUESA, LUIS | | | | |
| Department | AGRICULTURAL AND FOREST ENGINEERING | | | | |
| Teaching load distribution between lectures and independent student work | Lectures: 60h Student work: 90h | | | | |
| Important information on data processing | Consult this link for more information. | | | | |
| Language | Catalan / Spanish | | | | |

| Teaching staff | E-mail addresses | Credits taught by teacher | Office and hour of attention |
|------------------------------|---------------------------------|---------------------------|------------------------------|
| FERNÁNDEZ SERRANO, ÁLVARO | alvaro.fernandezserrano@udl.cat | 3 | |
| PUIGDOMENECH FRANQUESA, LUIS | lluis.puigdomenech@udl.cat | 3 | |

Learning objectives

The student upon passing the subject must be able to:

1. Know the behavior of the soil as a building material
2. Know the main soil tests and interpret a geotechnical report
3. Design the main elements of the project of a rural road (plan, elevation, type section, esplanade, drainage and firm)
4. Design the main elements of the project of an irrigation raft (stability of the dike, waterproofing, landfill)
5. Design the structure of an industrial shed and its foundation

Competences

General competences

CG1. Capacity for the previous preparation, conception, drafting and signing of projects whose purpose is the construction, reform, repair, conservation, demolition, manufacture, installation, assembly or exploitation of movable or immovable property that by its nature and characteristics are included in the own technique of agricultural and livestock production (facilities or buildings, farms, infrastructure and rural roads), the agri-food industry (extractive, fermentative, dairy, canning, horticultural, meat, fisheries, salting and in general, any other dedicated to the elaboration and / or transformation, conservation, manipulation and distribution of food products) and gardening and landscaping (urban and / or rural green spaces - parks, gardens, nurseries, urban trees, etc. -, public or private sports facilities and environments subject to landscape recovery).

CG2. Ability to direct the execution of the works subject to projects related to agri-food industries, farms and green spaces and their buildings, infrastructure and facilities, the prevention of risks associated with this execution and the management of multidisciplinary teams and human resources management, in accordance with deontological criteria.

Specific competences

CEMCR1. Bases and technology of rural constructions. Soil mechanics. Materials. Material resistance. Structure Design and calculation. Agricultural constructions. Infrastructure and rural roads.

Subject contents

Block 1

Unit 1: Soil mechanics. Characteristics of the soil as a building material.

Unit 2: Paths. Plotting, slope stability, surface drainage.

Unit 3: Irrigation rafts. Dock materials, stability, waterproofing sheets.

Block 2

Unit 4: The industrial warehouse- Vocabulary, structural typology

Unit 5: Enclosures. Enclosure materials and structure fixings

Unit 6: Straps. Design, sizing and testing criteria

Unit 7: Main structure in portico. Design criteria and joints

Unit 8: Main truss structure. Design criteria and joints

Unit 9: Secondary structures and local reinforcements. Braces, braces, stiffeners, bases

Unit 10: Foundations. Geotechnics and design of isolated footings

Methodology

Practices

- Exercises and examples in the classroom and at home
- Practical case of a rural road

Development plan

Units 1 to 3: professor Álvaro Fernández, 3 credits

Units 4 to 10: professor Lluís Puigdomènech, 3 credits

Evaluation

| Contents | Evaluation | Weight (%) | |
|----------------------|---------------|--------------|------------|
| Part 1: Units1 to 3 | Exam | 35 | 50 |
| | Computer work | 15 | |
| Part 2: Units 4 to 7 | Exercices | | 50 |
| | | TOTAL | 100 |

Each of the parts must be approved or at least with a result of 4.0 to be able to average with the other part. In part 1, the different evaluation systems will be weighted according to the table. For part 2, each and every one of the exercises will have the same value. If you do not pass, you will have to go to the final exam with one part if the other is approved or with the whole subject. In any case, the final grade will not exceed the lowest passing grade obtained in the first instance in class.

General criteria

A minimum formal correction is required in documents submitted by students, whether exams or practices. It is impossible to pass the subject if this requirement is not met. In the correction of exams and practices, the absence or incorrectness of the units in the numerical results, the concept errors, the gross errors or the contradictions will be penalized. The presence of any error described here may be sufficient cause for an exam to be failed.
