MATEU PIÑOL, CARLOS	carles.mateu@udl.cat	3	

Subject's extra information

To follow this subject, the student should have solid knowledge of structured, object and functional programming in python

Learning objectives

1. To know the current tools for Data Cleaning and Data Analyisis
2. To know the basics for the development of data-centric procedures using interactive programming tools
3. To know how to transform raw data from any source to consistent data for its analysis
4. To know how to implement and debug procedures for the transformation of massive data sets using Big Data approaches
5. To acquire a sceptic spirit in front of sets of data to incentive the exploratory analysis using computer science tools
6. To acquire the tools and knowledge for the descriptive analysis of potentially massive and intractable sets of data
7. To know and use the most basic data mining algorithms for discovering relevant features from big data sets
8. To know and use basic and advanced algorithsm for machine learning suitable for big data applications
9. To know the basics of recommender systems

Competences

University of Lleida strategic competences

- **UdL2:** Command of a foreign language.

Cross-disciplinary Competences EPS

- **EPS1:** Capacity of planning and organizing the personal work.
- **EPS3:** Capacity to convey information, ideas, problems and solutions to both a specialized and no specialized public.
- **EPS4:** Capacity to conceive, design and implement projects and/or contribute to new solutions, using engineering tools.

- **EPS5:** To be motivated for the quality and steady improvement.

General Competences

- **CG4:** Capacity to mathematically model, calculate and simulate in technological companies and engineering centres, particularly with regard to research, development and innovation tasks in all fields related to computer engineering.
- **CG8:** Capacity to apply the knowledge acquired for solving problems in new and unfamiliar situations within broader and more multidisciplinary contexts, and to be capable of integrating this knowledge.

Basic Competences

- **CB3:** Students are able to integrate knowledge and handle complexity, and formulate judgments based on information that was incomplete or limited, include reflecting on social and ethical.
- **CB4**: Students can communicate their conclusions -and the knowledge and rationale underpinning these, to specialist and non-specialist audiences clearly and unambiguously.

Degree-specific competences

- **CE1:** Capacity to understand and apply advanced knowledge in high-performance computing and numerical or computational methods to problems of engineering.
- **CE4**: Capacity to model, design, define the architecture, implant, manage, operate, administer and keep applications, networks, systems, services and computer contents.

Subject contents

1. Data mining and learning
    1. Mining frequent items/item sets and distinct elements
    2. Dimensionality reduction
    3. Linear and Logistic regression with SGD
    4. Naive Bayes classifiers
    5. Clustering
    6. Recommender systems
2. Neural networks and Deep Learning
    1. Introduction to neural networks
    2. Deep Neural Networks
    3. Convolutional Networks
    4. Recurrent Neural Networks
3. Control: Reinforcement Learning

Methodology

Every week, each student will receive:

- Three hours of class attendance. Lectures are conducted by theoretical explanations accompanied by illustrative examples in the first part, finalizing with practical exercices in the second part. As a support material of the class, we will follow the slides or python notebooks of the course.
- Other support materials to follow the subject in a non-attendance way.

The evaluation is continuous throughout the semester and consists of four different parts:

- Two practices: Extending the bigdata application started at the previous subject “Massive data processing" with neural networks and big data tools.

- Two reports and oral presentations about integrating neural networks and data minning tools in their bigdata application.

Due to the COVID-19 situation some classes will be non-presential, i.e. using videos and/or videoconferences.

Development plan

Weekly:

1. Mining frequent items/item sets.
2. Mining distinct elements.
3. Dimensionality reduction.
4. Linear and Logistic regression.
5. Naive Bayes classifiers.
6. Clustering - crisp and probabilistic.
7. Recommender systems.
8. Work on Data mining projects.
9. Work on Big data application.
10. Neural Networks.
11. Feed forward neural networks.
12. Deep Learning.
13. Convolutional Neural Networks.
14. Convolutional Neural Networks II.
15. Recursive Neural Networks.
16. Control: Reinforcement Learning.
17. Work on Deep Learning projects.
18. Work on Big Data Applications.
19. Final presentations of big data projects.

Due to the COVID-19 situation some classes will be on-line, i.e., using videos and/or videoconferences.

Evaluation

The assessment for this course is based on continuous evaluation.

Evaluation activities	%	Dates	O/V (1)	I/G (2)
Data mining application (3)	40%	End Sem.	M	G
Data mining application presentation (4)	10%	End Sem.	M	G
Deep learning exercises	25%	Middle Sem.	M	G
Data mining exercises	25%	Middle Sem.	M	G

(1) Mandatory / Voluntary

(2) Individual / Group

(3) There will be a revision of the work performed by each member of the group

(4) Each member of the group has to participate equally in the presentation and answer questions from the evaluator
